AHL Dual Mode & ARL Dual Mode Battery Installation Guide

1 **Unscrew the bottom portion of the light.**
This will open the battery compartment.

2 **Check the battery.**
The larger metal section goes in first. The smaller button section facing up into the light.

3 **Locate the manual button.**
To test that you have installed the battery correctly, cover the solar panel completely with your hand and press the manual button once to select Flashing Mode.

4 **Press the button a second time.**
This will employ Steady Burn. Press the button a third time to turn it off. If you do not cover the solar panel completely and press the manual button, nothing will happen.

5 **Take care of your AHL Dual Mode.**
We recommend removing the batteries and storing them separately when the airport lights are not in use to prolong their battery life.
