PUBLIC ROADS ADMINISTRATION FEDERAL WORKS AGENCY WASHINGTON 25, D. C.

INFORMATIONAL MEMORANDUM NO. 48

DATE: October 4, 1943

SUBJECT: TRAFFIC VOLUME TRENDS

Data for July 1943 from 23 automatic traffic recorders in addition to those shown in Informational Memorandum No. 45, indicate small changes in the traffic decreases tabulated in that memorandum. The revised summary for July 1943, with data from 595 automatic traffic recorders located in 45 States, is given in table 2. Decreases in the area rationed May 1942, (the eastern area), are 1.7 percent less than shown in last month's bulletin.

The average traffic decrease in August 1943, as compared with August 1942, table 1, is but 22 percent. On State highways the decrease is 21.9 percent; on local highways 14.3 percent. Two States, North Carolina and South Carolina, show traffic volumes greater than those of a year ago on State highways; and two States, Nebraska and Kentucky, show increases on local highways, although each of the latter States reports local road data from one station only.

When we turn to the monthly record of traffic since January 1940, given in the attached chart, it may be seen that traffic in both the eastern and western areas in August 1943 relative to August 1941, is greater than the comparable ratio in July 1943. It is possible that these relative increases resulted from the saving of gasoline during July for use in August, since July was relatively the lowest since these data have been compiled. On July 15 the Office of Price Administration issued an order permitting motorists to use gasoline for vacation trips, and it is probable that the August increases reflect, in part at least, this relaxation. In this connection it may be of interest to note that traffic increased from January to August for the country as a whole: in 1941, 54 percent; in 1942, 12 percent; in 1945 (preliminary data), 46 percent. Conclusions drawn from this last statement should be tempered by the fact that the traffic volume in January 1943 was but 58 percent of the January 1942 volume.

At the toll facilities, (table 3), traffic in August 1943 on 19 facilities from Maine to Florida decreased 44 percent in comparison with traffic in August 1941. It is evident that traffic on these facilities has held up better than upon the rural highways over the whole period, both in the East and in the West.

CITY TRAFFIC

Traffic recorded at three automatic recorders located in the city of Detroit, Michigan, is included in these bulletins for the first time. The decrease in traffic for 28 days in August 1943 from August 1942 amounted to 18.7 percent and ranged from approximately 17 percent on Six-mile Road at Conner to about 21 percent on Fourteenth Street at Edison. The decrease on Joy Road amounted to about the same percentage as the average for all three locations. The decrease of 18.7 percent in Detroit may be compared with that of 34.9 percent found on rural roads in Michigan at 28 locations. Weekday traffic on 3 routes in Washington, D. C., for August of the same years decreased 2.3 percent. Gasoline was rationed in this city in 1942 while it was not rationed in Detroit until December 1942. The decrease from 1941 was 29 6 percent in Washington. Figures for 1941 are not available in Detroit. The Saturday traffic in August 1943 was 33.3 percent less and the Sunday traffic 44.9 percent less than in August 1941 in Washington, D. C. Traffic using the Sumner Tunnel in Boston in August 1943 was 2.2 percent less than in August 1942, and 29.8 percent less than August 1941. These cities have been greatly affected by the influx of war workers and the above figures are not necessarily representative of city traffic decreases as a whole.

Nevertheless these data from city areas and from the toll facilities, the largest of which are located within or adjacent to cities, indicate that city traffic generally is higher than rural traffic in relation to the traffic of prior years.

H. S. FAIRBANK, DEPUTY COMMISSIONER, PUBLIC ROADS ADMINISTRATION.
