Informational Memorandum No. 17

Date: September 28, 1942

Subject: Traffic volume trends

Preliminary summaries of traffic data for August 1942 from 460 recorders located in 39 States indicate a decrease of 35.7 percent when compared with traffic for August 1941. Some of the August 1942 data are for but a part of the month, but even with this limitation, computation of the average daily traffic for the month is still closely accurate, and the revised summaries will be based on complete data for the month.

Three items stand out very clearly in the comparison: (1) Traffic decreases in the rationed areas are nearly double those in the unrationed areas; (2) traffic decreases on State highways are more than double those on local roads; (3) compared with 1941, traffic is progressively declining month by month, August showing a larger decrease than July.

^{*} Subject to revision

A revised summary of traffic data for July 1942 shows a progressively larger decrease in the ratio of 1942 to 1941 traffic with each succeeding month, region by region, throughout the country. Comparison with the similar summary for June 1942 shows that the decline has continued in every region regardless of whether or not gasoline is rationed, although the larger traffic decreases are found in the rationed area.

^{1.} Plus sign before percentage indicates increase

^{2.} Not including one station at which detour in 1941 affected the volume of traffic.

^{3.} Not including one station at which traffic was greatly augmented by military activities.

^{4.} Including eastern New York, Pennsylvania, West Virginia, and Florida, and all other Atlantic seaboard States listed above.

Additional traffic information, usually separated by the various types of vehicles, may be obtained at a number of points and areas throughout the country. Many of these are toll facilities and, because of that fact, are not strictly comparable with traffic on free highways or other facilities. Much of the data in the following tabulation is from urban areas and more representative of urban traffic.

receipt from the all the second

^{1.} Based on average day for August: Decrease for weekdays amounted to 25.6 percent; for Saturday, 28.6 percent and Sunday, 34.2 percent; at same locations.

General note: Vehicles using the George Washington Bridge and the Hudson and Lincoln Tunnels showed the following changes from August 1941, to August 1942: Total -32.7 percent, passenger cars -38.6 percent, trucks -13.0 percent, and busses #12.0 percent.

Two items may be clearly distinguished: (1) Traffic decreases in the rationed area greatly exceed those in the unrationed area; (2) decreases of commercial-vehicle traffic are either small (except on the rural facilities in Kentucky) or commercial traffic shows actual increases. Although the traffic decreases for the 11 routes within the District of Columbia are relatively small, it should be remembered that population in this area has increased very greatly within the past year.

H. S. Fairbank, Chief, Division of Information.

^{2.} Three weeks in each year. Free vehicles not included because they were not segregated by type.

^{3.} Approximately half of this highway is located in the unrationed area.

Revised Summary of Automatic Traffic Recorder Data for June 1942 Including 510 Stations in 43 States

Missouri	26	24.1			
Nebraska	12	18.7			
North Dakota	8	15.5 17.4			
South Dakota	9	17.4			

Both the foregoing tabulations are measures of traffic volume changes on rural highways. Data from 15 toll facilities in States along the Atlantic seaboard and within the rationed area show a decrease of 32.3 percent in total traffic for the period June 29 to August 2, 1942, as compared with a similar period in 1941. At these toll facilities passenger-car traffic decreased 36.1 percent, while commercial vehicle traffic increased 1.6 percent. Traffic on these facilities consists largely of urban vehicles.

Data from 13 points of heavy traffic volume within the District of Columbia for July 1942 are 19.75 percent below that for July 1941. This traffic is almost entirely urban and is also affected by the considerable population increases in the metropolitan district within the past year.

H. S. Fairbank, Chief. Division of Information.
