# ACKNOWLEDGMENTS

The contents of this ICC publication were developed by Brian Meacham, PhD, PE, Managing Principal of Meacham Associates (<https://meachamassociates.com/>). The author gratefully acknowledges the many photographs by the Federal Emergency Management Agency (FEMA) photographers that are individually cited within this publication, as well as the research undertaken by FEMA, the Multihazard Mitigation Council (MMC) of the National Institute of Building Sciences (NIBS), the National Institute of Standards and Technology (NIST), the National Oceanic and Atmospheric Administration (NOAA), the U.S. Geological Service (USGS), the Institute of Business and Home Safety (IBHS), which underpins this publication. The author sincerely appreciates the helpful input and review by ICC staff, and the extraordinary efforts of the many ICC committee members who draft, maintain, and enforce the International Codes® (I-Codes®).

## About The International Code Council

The International Code Council is a member-focused association. It is dedicated to developing model codes and standards used in the design, build, and compliance process to construct safe, sustainable, affordable, and resilient structures.

Most US communities and many global markets choose the I-Codes. ICC Evaluation Service (ICC-ES) is the industry leader in performing technical evaluations for code compliance, fostering safe and sustainable design and construction.

## About the Alliance for National and Community Resilience (ANCR)

The Alliance for National & Community Resilience (ANCR—pronounced “anchor”) is an ICC co-founded 501(c)(3) national coalition aimed at improving resilience and implementing good community practices in towns and cities across the United States and helping cities prevent infrastructure failure caused by natural and other disasters, thereby avoiding negative social, economic, and welfare repercussions caused by such damages. ANCR’s primary objective is the development of a system of community benchmarks—the first system of its kind in the United States—that will allow local leaders to easily assess and improve their resilience across all functions of a community. When adverse

events occur, all gears in the local system must continue to function. ANCR intends to give communities a voluntary, transparent, usable, and easily understandable accredited self-assessment that helps to showcase their whole community resilience and to provide a simple gauge of how their resilience continues to strengthen.
