

## Improving synergies between social protection and Public Finance Management: Country Analysis

The course includes one brief country analysis. As the assigned time for the analysis is 90 minutes, it will be more of an overview of the country situation.

Every week we will provide a brief exercise on data collection to ease the completion of this task. You do not need to send us the exercise, but we will be happy to provide support in case of difficulties.

To choose a country that will enable you to do the entire task more easily, please check that it has a publicly available PEFA report at <https://www.pefa.org/countries-regions>. Do note that several countries have PEFA reports that are not publicly available. We will come back to PEFA next week.

For this week, with your chosen country, in the World Social Protection Data Dashboard, <https://www.social-protection.org/gimi/gess/WSPDB.action?id=19>

Find information on the current situation of Social Protection coverage and the main Social Protection programs of the country. Please note that not everything is displayed in a single page, you may have to either click on the indicator buttons, or move across the Power BI pages (at the bottom). Filling out the following table may be helpful.

<b>Country Name</b>		
Population		
GDP per capita		
Informal employment		
<b>Social protection function</b>	<b>Coverage</b>	<b>Expenditure</b>
Aggregate		
Children		
Maternity		
Unemployment		
Work Injury		
Disability		
Old-Age		
Contributors to pension		
Vulnerability		
<b>Main social protection programs</b>	<b>Scheme/Programme benefit</b>	<b>Description of contributions and benefits</b>
Program A		
Program B		
Program C
