GoDrone 2.0 | Release notes

New Mission Statuses within CTR.

Introducing the "Reviewed" mission status: This innovative feature empowers LVNL to provide an advanced "Reviewed" status to flight plans submitted within CTRs. This provisional approval informs pilots that their flight plan has been reviewed and meets initial criteria, allowing them to proceed with pre-flight preparations with greater confidence.

Seamless transition to "Approved" mission status: Prior to the start of the flight the pilot will receive seamlessly an update to the mission plan to an "Approved" status, advising the mission is approved by ATC and the pilot can call Delivery for further instructions.

Enhanced communication and transparency: Pilots will receive real-time notifications of their flight plan's status updates throughout the approval process. These notifications will be delivered through the familiar channels – the GoDrone mobile app, the Operator Portal, and digital communication tools.

Other upgrades and new features also include:

- GoDrone Mobile App boasts a completely rebuilt modern user interface (UX/UI). This sleek and intuitive design makes navigating the mobile app and managing drone missions easier than ever.

- You can now create an organisation directly within GoDrone Mobile Apps, and manage all aspects of your flight planning for an organisation within a CTR as an organisation. You can switch easily between your personal profile and organisation profile depending on your planning needs.

- Updated Flight Planning Tools: Take flight planning to the next level with advanced drawing tools. Plan your flight directly within the mobile app or upload flight plan files from your device.

- New Reviewed & Approved Statuses: Gain valuable insights into your mission requests with real-time digital updates on the approval process.

- GoDrone Operator Portal Integration: Experience seamless data exchange between the GoDrone app and Operator Portal. Information, edits, and missions flow effortlessly between the two platforms.

- New Area Reports: Quickly understand flight restrictions with clear visual indicators. Area reports for the open category highlight prohibited, cautionary, and safe areas.

- Advanced Filter Setup: Customise your airspace view to suit your needs. Filter by political borders, NOTAMs, and other relevant data points for a clear picture of your flight zone.

- New Map Types: Plan your flights confidently using various map types, including satellite imagery, for increased situational awareness.

- Drone Hanger: GoDrone now lets you input and save information for all your drones directly within the app. Manage your fleet efficiently and ensure you have the right equipment for each mission.

- Ground hazard Integration: GoDrone now displays a list of ground hazards within the pre-flight report. Each hazard is clickable, providing detailed information to ensure a safe flight.

- Enhanced Security: Utilise the latest features on your phone or tablet, including eye and fingerprint recognition, for secure access to your flight planning tools.
