PENNSYLVANIA
2022 GOP PRIMARIES

Methodology

Interviews were conducted March 2-6, 2022 among a random sample of 960 Pennsylvania Republican primary voters contacted on landlines (227) and cellphones (733).

Results based on the full sample have a margin of sampling error of ±3 percentage points.

Telephone numbers were randomly selected from a statewide voter file of registered Pennsylvania voters using a probability proportionate to size method, which means phone numbers are proportionally representative to the number of voters in all regions across the state. Respondents were screened to identify potential participants in the Pennsylvania Republican primary elections.

The Fox News Poll is conducted under the joint direction of Beacon Research (D) and Shaw & Company Research (R).

Fieldwork conducted by Braun Research, Inc. of Princeton, NJ.

Results are of registered voters, unless otherwise noted.
An asterisk (*) is used for percentages of less than one-half percent.
A dash (-) represents a value of zero.
Some percentages may not add to 100% due to rounding. In the same way, percentages in "total" columns may be one point more or less than the sum of their parts due to rounding.
