

# Fast, Secure Backup to the Cloud

Veeam Cloud Connect. Cloud Backup Made Easy.

Veeam® delivers powerful and reliable features and functionality to help you avoid the risk of catastrophic data loss. Organizations leveraging Veeam as their backup solution can now easily choose TierPoint as a Service Provider for Veeam Cloud Connect. In the Veeam console, simply follow the steps to add a service provider to begin targeting a TierPoint cloud repository. With Veeam Cloud Connect, you get:

**Hosted offsite backups:** Get your physical and virtual backups offsite to a hosted cloud repository through a secure SSL connection with no additional Veeam licensing required.

**Complete visibility and control:** Access and recover data in hosted backup repositories directly from the backup console; track cloud repository consumption and receive reminders for hosted storage renewals.

**A modern backup architecture:** Leverage Veeam’s modern backup technology, including Backup Copy jobs with Built-in WAN Acceleration, forever incremental backups, GFS (grandfather-father-son) retention policies and more—all built into one product.

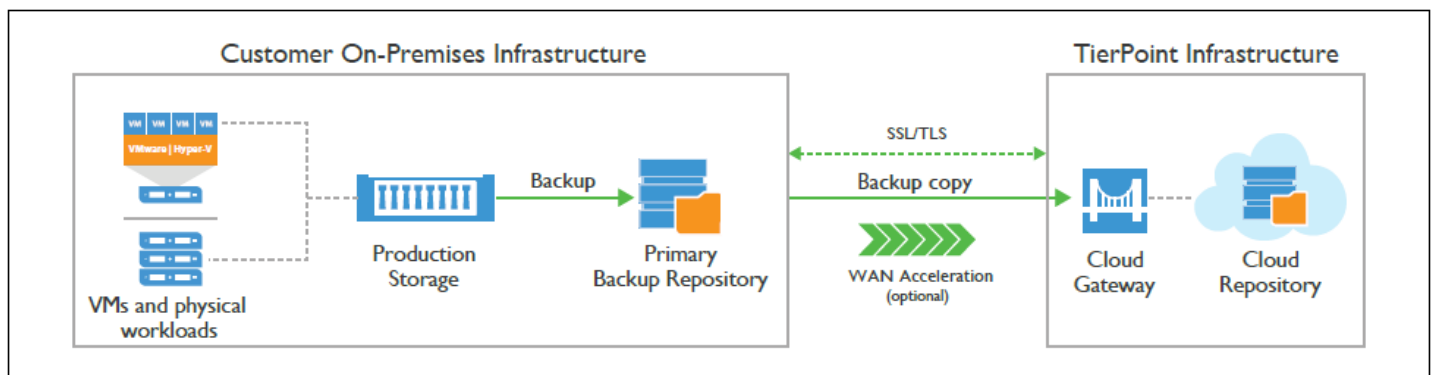

**End-to-end encryption:** Rest easy by encrypting all data at source (before it leaves your network perimeter), in flight and at rest, without negatively impacting the data reduction ratios of built-in compression and WAN Acceleration.

**Recovery to a TierPoint Multitenant Cloud:** TierPoint enables clients to recover VMs that are backed up into a Veeam Cloud Connect repository. A manual recovery of these VMs into their multitenant cloud EVDC will be performed by TierPoint. An existing EVDC must be properly configured for the restored VMs.

## The 3-2-1 Rule

The 3-2-1 rule states that you need to keep three copies of your data, stored on two types of media, with one copy being off site. Getting backups off site can be challenging due to limited bandwidth, exploding data volumes and a lack of resources required to build or maintain a true offsite backup repository.

With Veeam Cloud Connect, you can master the 3-2-1 rule without dumping money and resources into a second site or adding bandwidth—just leverage cloud backup repository services from a Veeam Cloud & TierPoint and take advantage of Veeam’s Built-in WAN Acceleration technology and so much more.
