

M.TECH. EMBEDDED SYSTEMS

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

Almost all Electronics, Electrical and Mechanical systems are now controlled by a controller, which is embedded as a part of the complete system. Such a system is called an Embedded System. Examples are tele-communication systems, chemical-processing plants, transportation systems such as aircrafts and automobiles, bio-medical instruments and home appliances like microwave ovens and washing machines. The characteristics of embedded systems are that they are designed to do some specific tasks often in real time satisfying certain performance requirements. It is achieved through the controllers and software called firmware stored in read only memory of the controller.

The vast majority of control systems built today are embedded, that is, they rely on built-in, special-purpose microcontrollers (digital computers) to close their feedback loops. Some systems may contain large number of controllers. In such settings, controllers often use shared networks to communicate with each other and with large numbers of sensors and actuators scattered throughout the system. The design of embedded controllers and the intricate, automated communication networks that support them raises many new problems- theoretical and practical- about network protocols, compatibility of operating systems, and ways to maximize the effectiveness of the embedded hardware. This course will address many such questions and aspects of embedded and networked control.

CURRICULUM
First Semester

CourseCode	Type	Course	L T P	Cr
18MA604	FC	Applied Mathematics for Embedded Systems	3 1 0	4
18ES601	FC	Embedded System Programming	3 0 2	4
18ES602	FC	Signal and Image Processing	3 0 2	4
18ES603	FC	Embedded Processor Architectures and Design	3 0 2	4
18RM600	SC	Research Methodology	2 0 0	2
	E	Live in Labs * / Elective – I		3
18HU601	HU	Amrita Values Program**		P/F
18HU602	HU	Career Competency I**		P/F
Credits				21

**** Non-credit course**

Second Semester

CourseCode	Type	Course	L T P	Cr
18ES621	SC	Distributed Computing	3 0 0	3
18ES622	SC	Internet of Things	3 0 2	4
18ES623	SC	Real Time Operating Systems	3 0 2	4
18ES624	SC	FPGA-Based System Design	3 0 2	4
	E	Elective – II		3
	E	Elective – III		3
18ES625	SC	Embedded Systems Applications Lab	1 0 2	2
18HU603	HU	Career Competency II	0 0 2	1
Credits				24

Third Semester

CourseCode	Type	Course	L T P	Cr
18ES798	P	Dissertation		8
Credits				8

Fourth Semester

CourseCode	Type	Course	L T P	Cr
18ES799	P	Dissertation		12
Credits				12

Total Credits: 65

List of Courses

Foundation Core

Course Code	Course	L T P	Cr
18MA604	Applied Mathematics for Embedded Systems	3 1 0	4
18ES601	Embedded System Programming	3 0 2	4
18ES602	Signal and Image Processing	3 0 2	4
18ES603	Embedded Processor Architectures and Design	3 0 2	4

Subject Core

18ES798	Dissertation		8
18ES799	Dissertation		12

Linear Algebra: Review of Matrices. Vector spaces and subspaces, linear independence, basis and dimensions, linear transformations, orthogonality, projections and least square applications. Eigenvalues and eigenvectors, Positive Definite Matrices - Minima, Maxima and saddle points, semidefinite and indefinite matrices, Singular value decomposition.

Optimization: Least-squares and linear programming, convex and non-linear optimization. Convex sets, Convex optimization Problems, Optimization problem in standard form, Quasi-convex optimization, linear optimization, quadratic optimization, inequality constraints, Semi definite programming, vector optimization. Duality, approximation and fitting, statistical estimation, geometric problems, Unconstrained minimization, gradient descent method, steepest descent method, Newton's method, Equality constrained minimization, eliminating equality constraints, Newton's method with equality constraints, Interior point method.

TEXT BOOKS / REFERENCES:

GNU Tools, Development and debugging Tools. Review of general C programming and data types, arrays, functions, pointers, structure, enum, files. Introduction to Embedded C, Interfacing C with Assembly. Embedded programming issues - Reentrancy, Portability, Optimizing and testing embedded C programs. Embedded Applications using Data structures, Linear data structures– Stacks and Queues, Linked List. Object Oriented programming introduction and basics, Scripting Languages for Embedded Systems - Shell scripting, Programming basics of Python. Software architecture of Embedded System.

TEXT BOOKS / REFERENCES:

Signal Processing: Review of Frequency and time domain analysis -Discrete Fourier Transforms, Fast Fourier Transform. Digital Filters-IIR Filters–Bilinear transformation. FIR filters–Windowing method- Application to real time signals : simulated, audio with noise filtering and analysis of signals.

Image Processing: Elements of Visual Perception- Image Sensing and Acquisition-Simple Image Formation- Image Sampling and Quantisation—Image Quality-Introduction to colour image-, Introduction to color image – RGB and HSI Models.Image transform: Fourier transform, DFT, Hadamard Transform. Filters- Image enhancement in Spatial domain: Introduction to image enhancement, basic grey level transforms, Histogram, Histogram-processing equalization, Matching & color histogram, Enhancement using arithmetic/logic operations, Spatial filtering, Smoothing spatial filtering, Sharpening spatial filtering.Image Enhancement in frequency domain: Smoothing frequency domain filtering, Sharpening frequency domain filtering.(Qualitatively)

Segmentation & Morphological operations: segmentation and threshold function, Different algorithms in thresholding, Line detection, Edge detection,Hough transform, Region based segmentation, Morphological-dilation and erosion, opening and closing.(Qualitatively). Selection of sensors and Processors for real time implementation.Shape Identification, Texture Identification, Colour Identification Applications in Real Time Scenario using Raspberry Pi Processor.

18ES621**DISTRIBUTED COMPUTING****3-0-0-3**

Basics of real-time systems: Functional, Temporal and Dependability requirements, Introduction to distributed computing systems (DCS), DCS design goals, Transparencies, Fundamental issues, System architecture, Composability, Scalability, Extensibility, Complexity, Distributed and Centralized architecture, Distributed Coordination: Temporal ordering of events, Lamport's logical clocks, Vector clocks; Ordering of messages, Physical clocks, Global state detection, Process synchronization: Distributed mutual exclusion algorithms, Performance matrix.

Modeling distributed real-time systems, Real time communication, Requirements of real time communication system, Flow control-Explicit and Implicit, Thrashing, Inter-process communication: Message passing communication, Remote procedure call, Transaction communication, Group communication; Broadcast atomic protocols, Deadlocks in distributed systems, Load scheduling and balancing techniques, Consistency Models, Fault Tolerance.

Introduction to Distributed System Models, High-Performance Computing, Grid Computing, Cloud Computing, Many-core Computing, Many-Task Computing, Data-Intensive Computing, Parallel architectures and Multithreaded programming. Introduction to GPU architecture and programming. Usage of tools for GPU Programming.

18ES622**INTERNET OF THINGS****3-0-2-4**

Introduction to IoT - Definitions, frameworks and key technologies. Challenges to solve in IoT - Embedded systems architecture: Key hardware and software elements. Low power and very low power embedded systems, peripherals and sensors in embedded systems, peripheral interfacing - SPI, I2C & CAN.

Evolving IoT standards - Basics of Networking & Sensor Networks - Applications, challenges - ISO/OSI Model, TCP/IP Model, Network Devices and Applications. Communication Protocols - Wired and Wireless LAN, Bluetooth, Zigbee, WiMax, etc. Communication models (Request-Response, Publish-Subscribe etc), IOT Protocols – MQTT, CoAP, HTTP REST, Web Sockets etc.

System design of an IoT - Sensor network architecture, scenarios, optimization goals, design principles & Protocol Stack, Hardware and software protocol stacks modifications for IoT - MAC, Routing and application layers, performance considerations. Modern trends in IOT – Wearable, industrial standards. Applications of IoT - Smart Homes/Buildings, Smart Cities, Smart Industry, and Smart Medical care, Smart Automation etc.

18ES623

REAL TIME OPERATING SYSTEMS

3-0-2-4

Overview of concepts of GPOS, GPOS functionalities, Introduction to real-time systems, RTOS basic architecture, RTOS vs GPOS. Architecture of OS (Monolithic, Microkernel, Layered, Exo-kernel and Hybrid kernel structures). Evolution of operating systems, POSIX Standards.

RTOS Kernel, Kernel services: Task Management - tasks, process and threads, task attributes and types - task states and transition, task control block, Introduction to real-time task scheduling, uniprocessor and multiprocessor scheduling concepts - RM, DM, EDF, Least Laxity First (LLF), clock-driven and priority-driven scheduling, preemption-context switching, blocking, priority inversion and solutions, response time analysis, processor demand analysis, Worst case execution time calculation, scheduling for fault-tolerance.

Timer Management, Interrupt handling, Memory Management, Input-Output handling, Task Communication and Synchronization - Semaphores and Mutex, Mailbox, Queue, Pipes, RPC, deadlock. Comparison and study of RTOS: FreeRTOS and μ COS – Case studies: RTOS for fault Tolerant Applications, picking RTOS for your project, RTOS trends in next 5 years.

18ES624

FPGA-BASED SYSTEM DESIGN

3-0-2-4

HDL – Role of HDL - HDL for Design Synthesis - Design Flow – Programmable logic: Simple PLDs, CPLDs ,FPGA HDL - A Simple Design – HDL elements - Data flow – behavioural – structural modeling - Creating Combinational and Synchronous Logic - Designing FIFO - Test Benches - State Machine Designs - Design Examples - Memory Controller - Mealy State Machines - Design Considerations - Hierarchy in Large Designs - Functions and Procedures – Subprograms.

General principles of circuit synthesis - Synthesis and Design Implementation - Synthesis and Fitting CPLDs, FPGAs- Resource Sharing - Creating Test Benches – Implementation technology – PLD's, Custom Chips, Standard Cell and Gate arrays – FPGA Architectures – SRAM based FPGAs – Permanently programmed FPGAs – Circuit design of FPGA fabrics – Architecture of FPGA fabrics – Logic Implementation of FPGAs - Physical design for FPGAs.

18ES625

EMBEDDED SYSTEM APPLICATION LAB

1-0-2-2

Each student in consultation with the faculty in-charge will select a topic related to embedded systems and applications and develop an embedded product/system following the embedded system design principles.

18RM600

RESEARCH METHODOLOGY

2-0-0-2

Unit I:

Meaning of Research, Types of Research, Research Process, Problem definition, Objectives of Research, Research Questions, Research design, Approaches to Research, Quantitative vs. Qualitative Approach, Understanding Theory, Building and Validating Theoretical Models, Exploratory vs. Confirmatory Research, Experimental vs Theoretical Research, Importance of reasoning in research.

Unit II:

Problem Formulation, Understanding Modeling & Simulation, Conducting Literature Review, Referencing, Information Sources, Information Retrieval, Role of libraries in Information Retrieval, Tools for identifying literatures, Indexing and abstracting services, Citation indexes

Unit III:

Experimental Research: Cause effect relationship, Development of Hypothesis, Measurement Systems Analysis, Error Propagation, Validity of experiments, Statistical Design of Experiments, Field Experiments, Data/Variable Types & Classification, Data collection, Numerical and Graphical Data Analysis: Sampling, Observation, Surveys, Inferential Statistics, and Interpretation of Results

Unit IV:

Preparation of Dissertation and Research Papers, Tables and illustrations, Guidelines for writing the abstract, introduction, methodology, results and discussion, conclusion sections of a manuscript. References, Citation and listing system of documents

Unit V:

Intellectual property rights (IPR) - patents-copyrights-Trademarks-Industrial design geographical indication. Ethics of Research- Scientific Misconduct- Forms of Scientific Misconduct. Plagiarism, Unscientific practices in thesis work, Ethics in science

18ES701 EMBEDDED SYSTEMS FOR AUTOMOTIVE APPLICATIONS 3-0-0-3

Automotive Fundamentals – Vehicle functional domains and requirements – The systems approach to control and automotive instrumentation – Sensors and actuators in various vehicle domains. Systems in Power train Electronics: Engine Management Systems: Spark Ignition, Petrol/ Diesel Injection Systems, Transmission Systems. Systems in Chassis control: ABS, ESP, TCS, Active Suspension Systems, Cruise control and adaptive cruise control systems – Drive-by-wire systems. Body electronic systems: Power Generation/ Storage, starting motor systems, Vehicle wiring systems, HVAC, Automotive alarm systems, Vehicle immobilization & deactivation, Driver information systems, Parking systems, Central locking system – electric windows – Occupants and driver safety systems: Seat belt lighteners and air-bags – Diagnostics Systems. Electric/Hybrid Vehicles and their configurations – Autonomous Vehicles and their challenges. Introduction to Embedded automotive protocols: LIN, CAN, FlexRay, MOST - AUTOSAR standard and its applications – OSEK/VDX Open Systems in Automotive Networks.

18ES703 EMBEDDED SYSTEMS IN BIOMEDICAL APPLICATIONS**3-0-0-3**

Overview of biomedical devices – Origin of bio potentials – bio potential electrodes – biopotential amplifiers, System Theory for Physiological Signals: Filters, Modeling – Embedded systems in Patient monitoring: ECG, EEG, EMG, Blood pressure, respiration, pulse oxymeters, diagnostic devices.

Noninvasive Diagnosis Using Sounds from Within the Body, Noninvasive Measurement of Blood Pressure, Measurement of Electrical Potentials and Magnetic Fields from the Body Surface and Plethysmography. Healthcare and the Wireless Sensor Network, Smart m-Health Sensing, m-Health and Mobile Communication Systems, Data Collection and Decision Making. m-Health Computing m-Health 2.0, Social Networks, Health Apps, Cloud and Big Health Data, m-Health and Global Healthcare and the Future of m-Health – case study.

18ES704**EMBEDDED SYSTEMS IN ROBOTICS****3-0-0-3**

Robots and Embedded Systems-Sensors - Sensor Categories, Binary Sensor, Analog versus Digital Sensors, Shaft Encoder; A/D Converter, Position Sensitive Device; Compass, Gyroscope, Accelerometer, Inclinometer, Digital Camera. Actuators - DC Motors, H-Bridge, Pulse Width Modulation, Stepper Motors, Servos. Control - On-Off Control, PID Control, Velocity Control and Position Control, Embedded Controllers, Interfaces, Operating System. Industrial Robots - Evolution of robotics, Robot anatomy, Design and control issues, Manipulation and Control. Direct Kinematic Model - Denavit-Hartenberg Notation, Kinematic Relationship between adjacent links, Manipulator Transformation Matrix; Inverse Kinematic Model – Manipulator Workspace, Solvability, Solution techniques, Closed form solution. Mobile Robots, Concepts of Localization and path planning. Autonomous robots and Introduction to Robot Operating System.

18ES705**EMBEDDED SYSTEMS IN SMART GRID****2-0-2-3**

Smartgriddefinition.Smartgridvs conventional grid.SmartGrid technologies- Power system and ICT in Generation,Transmission and Distribution. Basic understanding of power systems.Management aspects (Utility, Operator, Consumer).Evolution of automation in power system.

Smart Grid features- Distributed generation,storage,DD,DR,AMI,WAMS,WACS). Sensors - CT, PT; Embedded Devices - IED, PMU, PDC, CT, PT, relays, DR Switch; Algorithms; Communication- Standards, Technology and protocols. IoT applications in power system – Case study 1 generation control, load management, dynamic pricing etc; IoT for domestic prosumers. Case Study 2 -Smart microgrid simulator (SMGS),DR,DD,Energystorage,Communication.

18ES706 DESIGN FOR INTERNET OF THINGS AND CLOUD COMPUTING 2-0-2-3

Embedded Systems: Rise of embedded systems and their transition to intelligent systems and to Internet of Things -RFIDs, NFC, Web of Things - Embedded Systems Design: Partitioning to hardware and software; principles of co-design; performance of these systems - estimation of speed, throughput, power and energy consumption; hardware design elements -design, validation, and testing tools; software platforms –OS and applications, code optimization, validation and robust code generation; system integration, debugging and test methodology; tools for coding, debugging, optimization, and documentation; measurement of system performance, Creating virtual prototypes -hardware software emulation. IOT Reference Architectures, Introduction to Node Red, Visual Prototyping with Arduino and connectivity to IOT platforms, Applications: Healthcare and home automation examples.

Cloud Computing: Infrastructure as a Service (IaaS), Cloud Database, Cloud Storage.Platform as a Service (PaaS) for Web Rapid Application Development (RAD), Distributed Storage, Distributed Computing frameworks.Connectivity to remote server database, data access-storage-processing.Development of cloud server and web applications.

18ES707 SPECIAL TOPICS IN EMBEDDED SYSTEMS**3-0-0-3**

System analysis-user and market requirement, project specifications, structured analysis. System Modelling, Preliminary design – Hardware and Software Partitioning, Component Selection - Selecting the right sensors, processors, interfacing circuits, actuators, software modules and development environments, Testing and Debugging, User interface design and prototyping.Approaches to implementation-top down, bottom up, threads.

Major trends in embedded system - Processor - Single core, Multi-core, Multi-processor, Pervasive or ubiquitous or context-aware computing, Artificial Intelligence, Virtual and Augmented Reality, Embedded software, IoT, Computer/Machine vision, Cyber-physical systems.

Applications and Use cases - Wearable Electronics, Smart Healthcare, Automotive Embedded Systems, Smart agriculture, Consumer electronics like PDA, mobile phones, Smart homes/environments, Smart Community, Smart citiesandSmart grids, Virtual assistants, Robotics, Smart Security/Surveillance systems,Autonomous systems.

18ES708**MULTI-CORE ARCHITECTURES****3-0-0-3**

Review of Computer Design - Basics of Pipelining - Hazards, Measuring performance Instruction level parallelism - Branch prediction techniques - Static & Dynamic scheduling – Speculation - Limits of ILP. Thread-level parallelism, Multi-issue and Multi-core processors - Shared and Distributed memory Multiprocessor Architectures - Transaction Memory issues Memory hierarchy design - Cache coherence, Memory wall problem - Advanced Cache Memorydesign - Virtual Memory, Storage Systems - Ware-house Scale Computers - Power optimizationin multi-core systems - Multi-core architectures for embedded systems – Programmingenvironments for multi-core.

FAULT TOLERANT SYSTEMS

3-0-0-3

Hardware fault tolerance, software fault tolerance, information redundancy, check pointing, fault tolerant networks, reconfiguration-based fault tolerance, and simulation techniques. Students will gain familiarity with the core and contemporary literature in the area for dependable computing. Dependability concepts: Dependable system, techniques for achieving dependability, dependability measure, fault, error, failure, and classification of faults and failures. Fault Tolerance Strategies: Fault detection, masking, containment, location, reconfiguration, and recovery. Fault Tolerant Design Techniques: Hardware redundancy, software redundancy, time redundancy and information redundancy. Dependable communication: Dependable channels, survivable networks, fault-tolerant routing. Fault recovery, Stable storage and RAID architectures, and Data replication and resiliency. Case studies of fault tolerant multiprocessor and distributed systems.

GPU ARCHITECTURE AND PROGRAMMING

2-0-2-3

Introduction to Parallel Programming - Introduction to OpenCL - OpenCL Device Architectures - Basic OpenCL – examples - Understanding OpenCL - Concurrency and Execution Model - Dissecting a CPU/GPU - OpenCL Implementation - OpenCL case study: Convolution, Video Processing, Histogram and Mixed Particle Simulation - OpenCL Extensions - OpenCL Profiling and Debugging – WebCL.

SOFT COMPUTING

3-0-0-3

Neural Networks (NN) – Supervised and Unsupervised Learning – Hopfield – RBF Networks – Principal Component Analysis – PNN – Kohonen Self Organizing Networks – Learning Vector Quantization – Hebbian Learning – Adaptive Resonance Theory – Genetic Algorithms (GA) – Standard GA – Schema Theory – Building Block Hypothesis – Introduction to Support Vector Machines – Classification and Regression – Typical Applications Integrating Various Soft Computing Tools. Introduction to evolutionary algorithms-Ant Colony Optimization and swarm intelligence.

HARDWARE SOFTWARE CO-DESIGN

3-0-0-3

Introduction to system level design, Models of computation for Embedded Systems: Models taxonomy, State-Oriented & Activity Oriented Models, Structure & Data –Oriented Models, Heterogeneous Models, Architectural selection: Architecture taxonomy, Architectural Models, RISC,CISC, SIMD,MIMD, Partitioning:Types, issues, Hardware Software Partitioning Algorithms, Scheduling and communication: Estimations, Scheduling, allocation and binding. Scheduling Algorithms, Simulation, synthesis and verification: High Level Synthesis, Logic Synthesis and verification, Implementation case studies, Performance Analysis and Optimization, Retargetable code generation, FPGAs.

OBJECT ORIENTED PROGRAMMING

3-0-0-3

Introduction to object oriented software design, Comparison of programming methodologies, Object Basics, Java Environment, Classes and Object, Data Members, Access Specifiers, Arrays within a Class, Array of Objects, Constructors, Default Constructors, Destructors, Static Members, Constant Members, Object Oriented Design with UML, Class s , object diagrams and sequence diagrams. Overview of Streams, Bytes vs. Characters, File Object, Binary Input and Output, Reading and Writing Objects, Method Overriding, Polymorphism, Super, Interfaces and Abstract Classes, Packages, Use case diagrams and activity diagrams. Introduction to Threads, Creating Threads, Thread States, Runnable Threads, Coordinating Threads, Interrupting Threads, Runnable Interface Applets: Applet Architecture- Parameters to Applet - Embedding Applets in Web page, Component diagrams and Deployment diagrams.

18ES714

MACHINE LEARNING

3-0-0-3

Introduction to Machine learning, different forms of learning: supervised and unsupervised learning, classification and regression, parametric and nonparametric models, curse of dimensionality, linear and logistic regression, Basics of probability theory and probability distributions, information theory, Bayesian learning, Neural Networks, Gaussian Mixture models and the EM algorithm, Factor analysis, Principal components analysis, Independent Component Analysis, Kernels and kernel functions, Support vector machines for regression and classification, Decision trees, CART, Ensemble Methods: Boosting - Adaboost, Gradient Boosting; Bagging - Simple methods, Random Forest, Markov and hidden Markov models, Introduction to deep learning, Examples and case studies in machine learning.

18ES715

DEEP LEARNING

2-0-2-3

Probability and Information Theory , Basics of classical Machine Learning techniques, algorithmic differentiation-forward and backward. Introduction to Neural Networks, Backpropagation, Multi-layer Perceptrons . Overview of Computer vision Problems, Deep Learning for computer vision, Deep Feedforward Networks , Regularization for Deep Learning Optimization for Training Deep Models , Convolutional Networks , object detection and segmentation, Visualization and understanding, Generative models, Variational autoencoders, Sequence Modeling: Recurrent and Recursive Nets. Long short term memory networks (LSTM) . Applications in security and Autonomous navigation.

CRYPTOGRAPHY AND NETWORK SECURITY

3-0-0-3

Classical Encryption Techniques – Symmetric Cipher Model – Steganography – AES Cipher Symmetric Cipher – Multiple Encryption and triple DES – Blocks Cipher – stream Cipher – Confidentiality using symmetric encryption – Placement of encryption function – random number generation – Introduction to number theory – Cryptosystems – message authentication and Hash functions – requirements – functions – course – Hash and MAC algorithms – secure Hash algorithms – Digital signatures and authentication protocols – standard – authentication applications – Electronic mail security - S/MIME-IP security – overview-architecture – web security - socket layer and transport layer security – Intruders – Detection – Malicious software– viruses and related threats – counter measures – firewalls – design principles – trusted systems.

18ES717

SPEECH AND LANGUAGE PROCESSING

3-0-0-3

Introduction to Linguistics – natural language and formal language – regular expressions and finite state automata – words and their parts – morphology – parsing – word tokenization – pronunciation and spelling – N grams and language models – Transliteration – Transliteration using sequence labeling – Part of speech tagging – POS tagging using SVM – chunking – shallow parsing – context free grammars – Parsing using context free grammars – probabilistic and lexicalized parsing, CFG parser – Parsing techniques – structured output learning – generalized linear classifiers in NLP.

18ES718 ADVANCED DIGITAL SIGNAL PROCESSING AND PROCESSORS 3-0-0-3

Multirate Digital Signal Processing - Decimation, Interpolation, Cascade Equivalents, Fractional Sampling Rate Alteration, Applications- acquisition of high quality data, high resolution spectral analysis and design and analysis of narrowband digital filtering. Architecture of TMS320C6748 DSP - Instruction set – Addressing modes - Peripherals - Assembly language and C programming – Integrated Development Environment - Code Composer Studio. Digital Signal Processing implementation using TMS320C6748 DSP for digital filters - Levinson Durbin Algorithm Embedded Target for TMS320C6748 DSP Platform using MATLAB - Simulink. Application development using MATLAB – Simulink - Real-Time Workshop and hardware.

18ES719 MODERN CONTROL SYSTEMS 3-0-0-3

State Variable Analysis and Design: Introduction, concept of state, state variables and state model, state modeling of linear systems, linearization of state equations. State Space representation using physical variables, Phase variables and Canonical variables. Derivation of transfer function from state model, diagonalization, Eigen values, Eigen vectors, generalized Eigen vectors. Solution of state equation, state transition matrix and its properties, computation using Laplace transformation, power series method, Cayley-Hamilton method, concept of controllability and observability, methods of determining the same. Pole Placement Techniques: Stability improvements by state feedback, necessary and sufficient conditions for arbitrary pole placement, state regulator design, and design of state observer, Controllers- P, PI, PID. Non-linear systems: Introduction, behavior of non-linear system, common physical non linearity-saturation, friction, backlash, dead zone, relay, multivariable non-linearity. Phase plane method, singular points, stability of nonlinear system, limit cycles, construction of phase trajectories. Liapunov stability criteria, Liapunov functions, direct method of Liapunov and the linear system,

Hurwitz criterion and Liapunov's direct method, construction of Liapunov functions for nonlinear system.

18ES798

DISSERTATION

8

Each student should select and work on a topic related to his/her field of specialization during summer of second semester under the supervision of a faculty member. By the end of the third semester he/she must prepare a report in the approved format and present it.

18ES799

DISSERTATION

12

During fourth semester each student should work further on the topic of the minor project or a new topic under the supervision of a faculty member. By the end of fourth semester the student has to prepare a report in the approved format and present it. Finally there has to be a research paper published in a scopus indexed conference or journal with proper affiliation and approval from the department.
