

22CS803 Distributed intelligent processing in Edge computing systems 0 0 2 2

The course will run as a series of seminars to be presented by the research scholar. The topics for the seminar will be the following.

1. Learning at the Edge: Case Study of AgroESP.
2. Distributed Computation at Edge and need for Partial offloading.
3. Task splitting and offloading in Cyber Physical Systems - State of the art.
4. Task splitting and offloading in Cyber Physical Systems - gaps, challenges and opportunities.

The performance of the student in the seminar will be evaluated by a panel of examiners to be appointed by the Doctoral committee.
