

CORONAVIRUS DISEASE 2022

THREAT LEVEL-CODE RED

Situation Report-4 (PSA220010)

Data as reported by the American Samoa Department of Health by 8:30 PM on February 26, 2022

Situational Summary

One case from LBJ was not added to the cumulative count from February 25th, 2022. The count has been amended

On February 26, 2022, a total of 224 tests were conducted, among these, 9 tested positive. Of the 9 individuals who tested positive, 9 were fully vaccinated. There were no reported hospitalizations or deaths related to COVID-19. Anyone who tests positive is served with a Home Isolation Directive. They are to stay isolated at home for 14 days. All family members in the same household are considered close contacts and are served with a Home Quarantine Directive, also for 14 days. Enforcement of Home Isolation and Quarantine will be conducted by the Department of Public Safety and Office of Samoan Affairs.

80.3 % of the total population is fully vaccinated.

Health Advisories

If you have been in contact with someone who tested positive OR if you are experiencing fever, cough, difficulty breathing, fatigue, new loss of taste or smell, visit the DOH testing centers to get tested. You should feel better over the next 3-5 days. However, if your symptoms continue, please call 219 or 633-5871. A DOH doctor will help to determine if you need treatment.

Primary COVID-19 vaccination doses wane over time. Vaccines and booster shots offer the best protection against COVID-19 and its variants by reducing the possibility of severe symptoms, hospitalization, and death. DOH encourages everyone to get a booster shot as soon as you are eligible, especially for elderly people. Please remember prevention measures by practicing good hygiene, keeping a social distance of 6 feet, and wearing a mask.
