

Charting Marriage & Divorce in the U.S.: The Adjusted Divorce Rate, 2008-2022

Author: Krista K. Westrick-Payne

Beginning in 2008, the U.S. Census Bureau began asking respondents of the American Community Survey about events experienced in the past 12 months including marriages and divorces. In the same year, they also began asking respondents to report on the number of times they had been married. In conjunction with information on respondents' marital status, the NCFMR has been calculating and reporting on marriage and divorce rates in the U.S. since these variables were first made available to the public. In a special release series, we provide single year estimates charting marriage and divorce rates spanning the years 2008-2022. In this release, we focus on the adjusted divorce rate.

Adjusted Divorce Rate

$$\left[\frac{\text{number divorced in the past 12 months}}{(\text{number divorced in the past 12 months} + \text{the currently married population aged 15 or older})} \right] \times 1,000$$

Note: MOE = Margin of Error is a measure of sampling error and expresses the maximum range in which the rate is expected to differ from the actual population. The MOE is calculated for the derived estimates at the 90% confidence level.
