Foreword

It is my passion and purpose to travel the state of California and share what I see as the amazing miracle of California agriculture! The farmers, ranchers, farmworkers and others who play an integral role in our food supply are a testament to hard work, innovation, resiliency, and optimism.

Their labor of love is highlighted by the statistics recorded for 2022, where the market value of agricultural products sold by California's farms, ranches and plant nurseries was \$59.0 billion¹. California's agricultural export value increased in 2022 as well, totaling \$23.6 billion, which is 4.4 percent more than 2021!

While an annual gain in cash receipts is a positive measure in ensuring a healthy, nutritious food supply, annual gains do not necessarily equate to margins – additionally, it should be noted that this figure is known as "Farmgate Value" and does not account for value added by economic activity generated by movement through the supply chain.

There are good reasons why I am so passionate about our mission at CDFA to ensure safe, nutritious, high-quality food and agricultural products – produced with the highest environmental and labor standards. In a world of harsher and more frequent extreme weather events, our agricultural production is threatened by the dictates of mother nature and climate change. In recognition of that, California is making substantial investments in climate smart ag programs to support adaptation and the ability of farmers and ranchers to reduce greenhouse gas emissions and be part of the climate solution.

On the other end of the food chain, significant investments are being made in Farm-to-School programs to support small and mid-sized, historically underserved farmers and ranchers through local school procurement. These efforts represent holistic investments in the people of this state – in both nutrition education and experiential learning to inspire healthy lifelong habits in students and their families – to help them avoid chronic diseases and fully achieve their potential.

As our young people learn about the innovations and exciting agricultural technology that enhances our ability to produce food with care – for the environment as well as the people who make it possible – I know they will see what I see: California agriculture is about growing opportunity! It's a chance to be involved in a career – a calling, really – to produce food and ag products for healthy lives, healthy communities, and a healthy environment. How thankful I am for all the people who make our California agricultural bounty possible!

Thank you for your interest in this report and in California agriculture. The California Agricultural Statistics Review is the result of a joint effort between the U.S. Department of Agriculture's National Agricultural Statistics Service – California Field Office, and the California Department of Food and Agriculture. On behalf of the staff who collect, analyze and publish this important data, it is an honor to present this report to you.

Karen Ross, Secretary
California Department of Food and Agriculture

¹ Based on USDA 2022 Census of Agriculture published in February 2024.

Information on Data Citations

On February 13, 2024, the U.S. Department of Agriculture's (USDA) National Agricultural Statistics Service (NASS) announced the results of the 2022 Census of Agriculture. The U.S. Census of Agriculture is conducted every 5 years, with the 2022 Census spanning more than 6 million data points about America's farms and ranches and the people who operate them down to the county level. Additional ag census products, including state and county profiles and congressional districts will be released throughout 2024. The full 2022 Census of Agriculture report as well as publication dates for additional ag census data products can be found at nass.usda.gov/AgCensus. Ag census data can also be found in NASS's searchable online database, nass.usda.gov/Quick_Stats/.

The California Agricultural Statistics Review compiles state agricultural data from several sources: statistical reports published by the USDA NASS, U.S. farm sector income and wealth statistics published by the USDA Economic Research Service, agricultural export data provided by the Department of Agricultural and Resource Economics at University of California, Davis, and organic agriculture statistics provided by the California Department of Food and Agriculture's State Organic Program. The 2022 Census of Agriculture is not cited as a source for the California Agricultural Statistics Review. The cited sources referenced above each have a separate methodology which differs from the Census of Agriculture methodology. As such, there may be discrepancies when directly comparing data in the 2022-2023 California Agricultural Statistics Review to data in the 2022 Census of Agriculture.

For additional information, contact NASS Customer Service through email (nass@usda.gov) or by phone (800-727-9540).

Agricultural Statistical Overview

The sales value generated by California agriculture increased by 8.8 percent between the 2021 and 2022 crop years. The state's 68,400 farms and ranches received \$55.9 billion for their output, up from \$51.4 billion received in 2021¹. California's agricultural revenue was led by the dairy industry followed by grapes, miscellaneous crops (which includes nursery and greenhouse crops), and cattle and calves.

The dairy industry, California's leading commodity in cash receipts, generated \$10.4 billion for milk production in 2022, up 37.3 percent from 2021. Milk production decreased by 0.2 percent and milk prices received by producers increased from \$18.10 per hundredweight of milk sold in 2021 to \$24.90 per hundredweight in 2022. As the leading dairy producing state in the country, California produced 18.2 percent of the nation's supply in 2022.

Grape production generated \$5.5 billion in cash receipts in 2022, up 6.3 percent from 2021. Production decreased by 4.0 percent from 2021, and prices received by growers increased from \$908 per ton of grapes in 2021 to \$1,000 per ton in 2022.

Total cash receipts generated from cattle and calves in 2022 was \$3.6 billion, up 25.1 percent from 2021. Cattle and calves accounted for 20.8 percent of the state's total livestock receipts for 2022.

California remained the leading state in cash farm receipts in 2022 with combined commodities representing 10.4 percent of the U.S. total. California's leading crops remained fruits, nuts, and vegetables.

California organic sales have increased by 18.2 percent from \$9.4 billion in 2018 to \$11.1 billion in 2022. Organic production site acreage in the state has decreased by 4.0 percent from 1,909,400.67 acres in 2018 to 1,833,914.77 acres in 2022. California accounts for 36 percent of organic sales in the U.S.

Farm Facts

In 2022, 68,400 farms operated in California, down 0.9 percent from 2021. Twenty-nine percent of California farms generated commodity sales over \$100,000, exceeding the national average of 20.7 percent. The amount of land devoted to farming and ranching in California was 24.0 million acres in 2022, down from 24.2 million in 2021. The average farm size was 351 acres in 2022, unchanged from the 2021 average farm size and below the 2022 national average farm size of 463 acres.

Land Values/Cash Rents

The average value per acre of California farm real estate in 2022 was \$12,000, up 10.1 percent from the 2021 value of \$10,900 per acre. During the year, the value of irrigated cropland increased 11.0 percent to \$18,100 per acre, and the value of non-irrigated cropland increased 11.9 percent to \$6,600 per acre. The average value of all cropland increased 11.2 percent, compared to the previous year, to \$15,410 per acre. The value of pastureland increased 14.5 percent to \$3,550 per acre. The rental rate of irrigated cropland increased to \$465 per acre in 2022, up from \$461 per acre in 2021. Pastureland rental rates also increased during the year, rising from \$12 per acre in 2021 to \$13 per acre in 2022.

Top Commodities

California's top 20 crop and livestock commodities accounted for \$47.9 billion in value in 2022. Thirteen commodities exceeded \$1 billion in value in 2022. The cash receipts of 14 of the top 20 commodities increased in value in 2022, compared to 2021. Of the top 20 commodities, chicken eggs, broilers, and lettuce showed the largest growth in cash receipts during the year.

Weather Highlights for 2022

After wet and cold storms in December 2021, January 2022 began dry for most of the state over the New Year's holiday as a high-pressure system settled over central California. The dry upper level airmass produced the common winter inversion pattern of morning fog and sunny afternoons for the first half of the month. The first week of the year, Pacific Northwest storms skirted over the North State, only bringing some rain to the North Coast. A low-pressure system moved eastward across southern California on January 18, providing sufficient mid-level clouds over much of the San Joaquin Valley to prevent fog formation overnight. The quick system resulted in some scattered light showers across the state. A high-pressure system developed again, and the central valleys returned to the morning fog and afternoon sun cycle. As the month drew to a close, an upper-level low pressure system dropping southward through the Great Basin interacted with the dominant high-pressure center over California to produce a strong offshore gradient over the Sierra Nevada Mountains and Deserts strong northeast wind gusts exceeding 60

mph. January's statewide average temperature was 2.6°F above the 1991–2020 mean (44.3°F). Rainfall was well below normal for January, and much of the central California interior was classified as being in a severe drought by the end of January 2022, due to a long-term precipitation deficit. As of January 31, 2022, most of the impacted area had received less than 50 percent of normal precipitation since July 1, 2020. Following an impressive state snowpack of 160 percent on December 30, 2021, the February surveys revealed just how dry January was. At the end of the month, the second snow survey of the winter put the state total at only 92 percent of normal. Typically, January is one of the snowiest months of the year. The state's two largest reservoirs, Shasta and Lake Oroville, were at 55 percent and 80 percent of their historic levels, respectively.

With a high-pressure system over the state bringing clear skies and light winds, February began with foggy mornings in the valleys. A strong northerly flow ahead of an upper high-pressure ridge off the California coast brought a cold and dry airmass into the area, lowering temperatures below the freezing mark in much of the San Joaquin Valley during the early mornings of the first week of the month. The following week, a high-pressure system warmed the state well above normal temperatures. Mid-month, a cold low-pressure system dropped southeast through California, lowering temperatures to near seasonal norms. This system was moisture deficient, with much of the Sierra Nevada picking up 0.10 inches or less of liquid precipitation, while the lower elevations picked up trace amounts at most. A strong cold front ahead of a very cold upper trough dropped southward across the state on February 21. This system brought much cooler temperatures to the area. This system spread precipitation across

the state, with the precipitation falling as snow above 2,500 feet. The snow level lowered to around 1,000 feet in post-frontal showers. A few thunderstorms were also observed in the San Joaquin Valley during the afternoon and early evening hours, where most stations picked up between a few hundredths of an inch to 0.25 inches of rainfall. A few stations impacted by heavier thunderstorms picked up around 0.5 inches of rain, and there were reports of ice pellet showers. As an upper shortwave system dropped southward through the area, low snow led to the closure of Interstate 5 south of Grapevine and State Route 58 through Tehachapi. Most of the Sierra Nevada and Tehachapi mountain ranges above 3,000 feet picked up between 3 and 9 inches of new snowfall, while elevations between 1,000 and 3,000 feet generally picked up between 1 and 3 inches of new snow. The month ended with a cold air mass over central California in the wake of the winter storm. With skies having cleared out across the area and winds becoming light, widespread sub-freezing temperatures were observed across the San Joaquin Valley each morning between February 24 and February 26.

The first week of March, a low-pressure system dropped south off the coast, then turned inland across southern California spreading moderate to locally heavy precipitation with localized street flooding across the region. The snow level dropped to 4,000 feet in the Tehachapi Mountains. A colder airmass followed the low-pressure system, lowering the snow level to around 2,000 feet. Snowfall was generally 3 to 6 inches above 5,000 feet. Low-lying portions of the San Joaquin Valley experienced several mornings of freezing temperatures. Midlevel clouds moved in and tempered the chilly mornings. An upper trough pushed through California mid-month, while the far northern half of the state was doused with heavy precipitation from a wet Pacific Northwest system. After a period of unseasonably warm temperatures across the state between March 22 and March 26, an upper low-pressure system approached the southern California coast and brought increased winds and a fast-moving band of showers to the West Side Hills and the Tehachapi Mountains. Behind this band, skies cleared out, and with cooler air pushing into the area aloft, instability was sufficient for thunderstorms to develop across the San Joaquin Valley and Sierra foothills. Stations above 5,500 feet in the Sierra Nevada picked up between 3 and 8 inches of new snowfall, while those above 5,500 feet in the Tehachapi Mountains picked up between 2 and 6 inches of new snow. Despite a

chilly close to the month, the statewide maximum temperature was 3.0°F above the 20-year norm. The fourth snow survey of the year put the state total at 38 percent of normal.

A warmer than usual start to April was also dry. The northern reaches of the state received some precipitation from the lagging edge of a Pacific Northwest cold front, but a high-pressure system off the California coast kept most of the state dry and windy. A strong low-pressure system moved east across the Pacific Northwest on April 11, spreading precipitation southward. The cold front pushed temperatures in the San Joaquin and Sacramento Valleys down to as much as 6°F below normal and deposited 3 to 8 inches of snow above 6,000 feet. Mid-month, a low-pressure system moved into northern California, spreading precipitation southward into central California and between 3 to 7 inches of new snow above 7,000 feet in the Southern Sierras. Another strong low-pressure system moved over the state and produced widespread precipitation, including snow above 6,000 feet. Snow gauges recorded 15 or more inches of snow in Yosemite Park and southward in the Sierras. A dry upper trough moved through central California the last days of the month, bringing a much cooler airmass into the area. This system also brought increased winds across the San Joaquin Valley and Tehachapi Mountains. The statewide mean temperature for April was only 0.3°F above the 20-year average. The statewide precipitation was 1.95 inches, or 107.1 percent of the 20-year norm. The final snow survey of the year put the state total at 30 percent of normal.

May started with near seasonal normal temperatures and was dry, excluding some precipitation from a Pacific Northwest storm that skirted the far northern regions of the state. A strong upper trough pushed over the region as the second week began. This produced a very strong onshore pressure gradient that drove high winds and brought unseasonably cool temperatures along with some light showers in the northern half of the state. The Pacific Northwest storm track stayed north of the state for much of the last portion of the month. A strong upper ridge built over the state, resulting in summer-like triple-digit temperatures in the San Joaquin and Sacramento Valleys. The edge of a Pacific Northwest storm brushed the northeastern corner of the state before the month closed on a dry and warm note. The statewide maximum temperature was 1.1°F below the 20-year norm due to the exceptional cool spell

early in the month. The statewide precipitation was a mere 0.42 inches, or 38.9 percent of normal. The U.S. Drought Monitor for May 31 estimated that nearly 97.6 percent of the state was experiencing severe to exceptional drought conditions. The state's two largest reservoirs, Shasta and Lake Oroville, were at 48 percent and 68 percent of their historic levels, respectively, by May 31.

The month of June began with at or above normal temperatures in the San Joaquin Valley and around normal for the Sacramento Valley. A Pacific Northwest storm system swung south to bring 1 to 2 inches of rain to the north coast and showers as far south as San Francisco and Sacramento. A large area of high pressure strengthened over the area, which resulted in temperatures rising 3°F to 7°F above normal. Midmonth, a low-pressure system moved into the Pacific Northwest, pushing a cold front over the state, plunging temperatures to slightly below normal levels and spreading rain across

the North Coast and Sacramento Valley. In the third week of the month, a surge of moisture from Tropical Storm Celia off the west coast of Mexico moved over the hot and unstable airmass situated over central California, bringing scattered showers and thunderstorms to the Tehachapi Mountains and San Joaquin Valley. The statewide precipitation was 0.47 inches, or 120.5 percent of normal. The statewide mean temperature was 70.7 °F, or 1.5°F above the norm.

July started off dry and slightly cooler than seasonal norms. Some showers skirted over the northern extremes of the state the first week of the month. A large area of high pressure centered over the Great Basin during the second week brought triple-digit temperatures to the Sacramento Valley. As the high pressure built westward, the dangerous heat conditions expanded over the central valleys and Sierra foothills. Tropical moisture over the desert southwest brought showers to the east side of the

¹ Total value is based on USDA Economic Research Service cash receipts, August 2023 release.

² Includes nursery/greenhouse crops (excluding Floriculture), Christmas trees, seed crops, and miscellaneous field, vegetable, berry, tree fruit, and nut crops. Beginning in 2021, industrial hemp is included.

Sierras and desert region. The gradient over the Great Basin drove an easterly flow aloft over central California, allowing upper-level moisture to stream into the area for showers and thunderstorms to end the month. The U.S. Drought Monitor for July 26 estimated that nearly 94.5 percent of the state was experiencing severe to exceptional drought conditions. The state's two largest reservoirs, Shasta and Lake Oroville, were at 54 percent and 62 percent of their historic levels, respectively, by July 31.

Though usually August is a dry month of the year, August 2022 began wet. Mid-level tropical moisture from Hurricane Frank, situated off the Baja coast, spread northward across the state and interacted with the very warm and unstable airmass over the region. Showers and thunderstorms brought moderate to locally heavy rainfall to the mountains and deserts, as well as some localized flooding. Following this, tropical moisture from the Gulf was pulled up along the Sierra Crest, bringing light afternoon showers into the middle of the month. A large area of high pressure over the area between August 16 and August 20 provided much warmer than normal temperatures and dangerous heat across the San Joaquin Valley and Sierra foothills. An upper trough pushed into the Pacific Northwest, which weakened the large high-pressure center and brought a cooling trend. A high-pressure system

centered over the Great Basin built westward into California, closing August with very hot and dry weather. The statewide mean temperature was 2.6°F above the 20-year norm and the second warmest August in recorded history. The statewide precipitation was 0.40 inches, or 222.2 percent of normal.

A record setting heat wave in the first nine days of September made the ongoing drought conditions worse as the intense heat continued to dry out the soil. This was followed by scattered showers and thunderstorms as moisture from Hurricane Kay off the coast of Baja surged briefly into the area. While rainfall amounts were generally light, several slow-moving thunderstorms in the Sierra Nevada and Tehachapi Mountains brought locally heavier rainfall amounts and resulted in roadway flooding and some mudslides in burned areas. An upper trough pushed through the region late in the month, resulting in scattered showers generally from Fresno County northward. The snow level lowered to 8,000 feet as the storm progressed, leaving between 1 to 3 inches of new snowfall in the mountains. The month ended with warm and dry conditions. The statewide maximum temperature was 1.3°F above the 20-year norm and the second warmest September in recorded history. The statewide precipitation was a mere 0.87 inches.

Source: California County Agricultural Commissioners' Reports

October began dry and warmer than normal. This persisted for much of the month. Tropical cyclone remnant moisture swung up across the desert southwest, bringing showers to the Los Angeles region the second week of the month and triggering lightning storms. A cold upper low-pressure center dropped southeast out of the Gulf of Alaska on October 21 and moved into the Pacific Northwest. The strong cold front pushed southward over California, which brought some light showers in the north state, Cascades, and northern Sierras, as well as a period of strong winds and cooler temperatures to most of the state. The statewide maximum temperature for the month was 3.0°F above the 20-year norm. The statewide precipitation was 0.14 inches, or only 11.4 percent of normal.

November began wet. On the second day of the month, a cold front brought widespread precipitation across the area. Much of the Sierra Nevada picked up between 0.25 and 0.5 inches of liquid precipitation, with several stations above 6,000 feet reporting 3 to 5 inches of new snow. A large trough associated with a cold Pacific Northwest system pushed into California, bringing widespread precipitation and up to 2 feet of new snow above 6,000 feet. The San Joaquin Valley received 0.5 to 1 inch of rain and strong southerly winds with gusts exceeding 50 mph in the valley. Scattered thunderstorms developed over the San Joaquin Valley, producing locally heavy rainfall and strong outflow winds in addition to quarter to half-inch diameter hail. High pressure built over the state as the large upper trough moved east. The skies cleared and winds diminished, resulting in areas of fog forming in the Sacramento and San Joaquin Valleys in the morning hours and dissipating by mid-morning. This typical winter morning fog cycle persisted until a cold dry airmass settled over the area the third week of November. Clear skies and radiational cooling pushed early morning temperatures in the central valleys below the freezing mark for much of the week. A dry low-pressure system dropped into the Great Basin on November 28, promoting a strong surface pressure gradient that drove a period of gusty winds over the ridge tops. A cold airmass settled over the San Joaquin Valley, bringing clear skies and strong radiational cooling, resulting in many locations reporting freezing temperatures. The southern edge of a wet Pacific Northwest stormfront skirted over the northern edge of the state as the month

concluded. The statewide maximum temperature was 4.7°F below the 20-year norm. The month was abnormally dry, as most of the area had slightly below normal precipitation totals for the month. By the end of the month, most of the state remained in an extreme or exceptional drought.

The first of December saw a large low-pressure system drop southeast out of the northeast Pacific, bringing widespread precipitation across central California. Much of the Sierra Nevada picked up between 1.5 and 3 inches of precipitation, and elevations above 6,000 feet received between 1 to 2 feet of snow. Skies cleared, resulting in localized dense fog across the San Joaquin Valley before an upper-level trough moved through the region, bringing another round of widespread precipitation. This system was enhanced with warm tropical moisture, which resulted in high snow levels. Much of the Sierra Nevada picked up between 2 and 4 inches of rain, while the adjacent foothills picked up between 1.5 and 3 inches of rain. A weak area of high pressure built over central California. This provided favorable conditions for areas of dense morning fog to form in the San Joaquin Valley before the next storm system. A strong low-pressure system slowly moved over the state, dropping moderate to heavy precipitation. Above 5,000 feet, between 18 to 30 inches of snow fell. The snow level lowered to 3,000 feet in the Sierras and to 4,000 feet in the Tehachapi Mountains. Debris flows and flooding were reported in the foothills of the Sierras. Mid-December saw a respite from the precipitation as a cold dry airmass settled in over the state. Clear skies, light winds, strong radiational cooling, and a low-level inversion made for favorable conditions for the winter cycle of morning dense fog in many areas of the central valleys. This persisted until December 27, when an atmospheric river pummeled the state with heavy rain, snow, and strong winds. Flash floods, rockslides, debris flows, and high winds toppling trees and powerlines were reported across the state. The month ended with a large upper-level trough laden with tropical moisture, bringing heavy precipitation, widespread flooding, and between 4 to 7 inches of rainfall to the Sierras. By the end of December, the statewide precipitation was 6.79 inches, or 158.6 percent of normal. The end-of-year storms opened the door for a series of atmospheric rivers that would bring a record snowpack and refill the historic lakebed of Lake Tulare in early 2023. The month's cold storms and midmonth persistent cold air mass pushed the statewide maximum

temperature down 2.3°F below the 20-year norm. Lake Oroville's level at the end of the month was 69 percent of historic levels, or 14 percent more than at the start of the month. The 2022–2023 winter's first snow survey on January 3, 2023, estimated the statewide snowpack to be 174 percent of normal for that date. Though much of the Sacramento and San Joaquin Valleys were still experiencing exceptional drought conditions, the U.S. Drought Monitor estimated 71.1 percent were under severe to exceptional drought on January 3, 2023. This was a dramatic recovery from the nearly 94.5 percent of the state experiencing severe to exceptional drought at the end of July 2022.

Crop and Livestock Commodities in which California Leads the Nation ¹

Almonds	Flowers, Bulbs	Mandarins & Mandarin Hybrids ²	Plums, Dried
Apricots	Flowers, Cut	Melons, Cantaloupe	Pluots
Artichokes	Flowers, Potted Plants	Melons, Honeydew	Pomegranates
Avocados	Garlic	Dairy products, Milk	Potatoes, Sweet
Beans, Dry Lima	Grapes, Raisins	Nectarines	Raspberries
Blueberries	Grapes, Table	Nursery, Bedding Plants	Rice, Sweet
Broccoli	Grapes, Wine	Nursery Crops	Safflower
Brussels Sprouts	Hay, Alfalfa	Olives	Seed, Alfalfa
Carrots, Fresh	Herbs	Onions, Green	Seed, Bermuda Grass
Carrots, Processing	Jojoba	Oranges	Seed, Vegetable and Flower
Cauliflower	Kale	Parsley	Spinach
Celery	Kiwifruit	Peaches, Clingstone	Strawberries
Cotton, American Pima	Kumquats	Peaches, Freestone	Tomatoes, Processing
Daikon	Lemons	Peppers, Chili	Triticale
Dates	Lettuce, Head	Persimmons	Vegetables, Greenhouse
Eggplant	Lettuce, Leaf	Pigeons and Squabs	Vegetables, Oriental
Escarole/Endive	Lettuce, Romaine	Pistachios	Walnuts
Figs	Limes	Plums	Watercress

¹ California is the sole producer (99 percent or more) of the commodities in **bold**.

² Includes tangelos, tangerines, and tangors.

Global Marketplace

California's agricultural exports reached \$23.6 billion for 2022, which represents an increase of 4.4 percent from 2021. In 2022, California accounted for 12.8 percent of total U.S. agricultural exports, down from 13.6 percent in 2021.

Significantly, California is the nation's sole exporter of many agricultural commodities, supplying 99 percent or more of the nation's exported almonds, artichokes, figs, garlic, kiwifruit, olives and olive oil, pistachios, plums, prunes, raisins, table grapes, tomatoes for processing, and walnuts.

Commodities that experienced the largest year-over-year gains in export value include wheat, cottonseed and byproducts, cauliflower, dairy and products, and mushrooms.

California's Top 10 Agricultural Export Markets, 2022			
Rank	Country	Export Value \$1 Million	Leading Exports
1	Canada	3,647	Wine, Strawberries, Lettuce
2	European Union	3,072	Almonds, Pistachios, Walnuts
3	China/Hong Kong	1,801	Pistachios, Almonds, Dairy and Products
4	Japan	1,631	Rice, Almonds, Dairy and Products
5	Mexico	1,514	Dairy and Products, Table Grapes, Tomatoes (Processed)
6	South Korea	1,178	Dairy and Products, Almonds, Beef and Products
7	India	1,163	Almonds, Cotton, Pistachios
8	United Arab Emirates	549	Almonds, Walnuts, Pistachios
9	Philippines	512	Dairy and Products, Wine, Raisins
10	Taiwan	381	Dairy and Products, Beef and Products, Table Grapes

Source: University of California, Department of Agricultural and Resource Economics

Commodities that experienced the largest decreases in export value, compared to the prior year, include eggs, broccoli, avocados, olives and olive oil, and cherries.

California's agricultural export values have grown by 9.6 percent over the past 10 years.

19	Peaches and Nectarines	121	146	149	2.5
20	Raspberries and Blackberries ⁵	140	162	146	-9.4

¹ Total export values for each year are rounded to the nearest million dollars. More precise values are used in the percent change calculations.

² Export values for 2021 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ Export values for 2020 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

⁴ Hides and skins are included in the category "Beef and Products".

⁵ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

¹ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

² A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

County Statistical Data

In 2022, California counties reported a total value of agricultural production, excluding timber, of \$66.2 billion, which represents a 2.9 percent increase from the prior year. Seven counties reported value of production exceeding \$3.0 billion each. Fifteen counties reported a value of production exceeding \$1.0 billion each. Tulare County was the leading county in the state, with an agricultural production value of \$8.61 billion, which represents an increase of 6.5 percent from 2021. Fresno County was second in value of production for the year at \$8.09 billion, which represents a decrease of 0.3 percent from the prior year. Kern County ranked third in value of production for the year, decreasing 7.7 percent from the previous year to \$7.70 billion in 2022. Monterey County remained fourth in value of production at \$4.64 billion, which represents an increase of 13.2 percent from 2021.

In 2022, the total value of agricultural production, including timber, was \$66.4 billion, which represents a 2.9 percent increase from the prior year. During the year, Humboldt County recorded the highest timber value in the state at \$99.3

million. Timber accounted for 36.4 percent of Humboldt County's total agricultural value for the year.

Gross Value in Agricultural Commissioners' Reports

The gross value of production presented in this section includes all farm production, whether sold through usual marketing channels or used on the farm where it is produced. This includes the value of pasture and range feed. Fresh fruit and vegetable crop values are based on the Free-On-Board (F.O.B.) packed price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. Consequently, the values summarized in this report are not comparable to the values estimated by USDA's National Agricultural Statistics Service.

Some counties include timber as a part of their crop report, following the pattern set by the California County Agricultural Commissioners

Top 15 Commodities by Value of Production and Leading Counties, 2022

and Sealers Association. Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this section.

County Agricultural Commissioners' Reports

Information presented in this section is based on the annual crop reports compiled by the California County Agricultural Commissioners. These reports provide detailed annual data available on agricultural production by county.

Reports were received from 51 of the 58 counties for 2022. County Agricultural Commissioners' reports from the following counties were not available at the time of publication: Alameda, Contra Costa, Del Norte, Mendocino, Siskiyou, and Trinity. Data for Alameda, Contra Costa, Mendocino, and Siskiyou counties were pulled forward from 2021, however, since data for Del Norte and Trinity has not been available for the past three years, these counties are not included in the tables presented in this section. Additionally, San Francisco County had no agricultural production in 2022 and therefore did not publish a County Agricultural Commissioners' Report. San Francisco County is also not included in the tables presented in this section.

The methodology and data sources for the county reports varies by county. Data sources may include voluntary producer surveys, regulatory and inspection data, shipment data, and commodity board assessments. Copies of individual County Agricultural Commissioners' Reports may be obtained directly from each County Agricultural Commissioner's office or found at: cacasa.org/crop-reports/

The level of detail of the data in the county reports also varies by county. For example, one county may publish acreage and total value of production for all grapes, and another county may publish acreage, tonnage produced, and total value of production separately for wine grapes, table grapes, and raisin grapes. In this section, detailed data is published when it is available in the county's report. Information presented in this section is also summed into commodity groups, such as "Grapes, All", and commodity categories, such as "Fruit & Nuts" to assist with comparison between counties. Additionally, commodity names and groupings have been updated to allow for greater detail and comparability to the counties' data.

Credit is due to the County Agricultural Commissioners and their staff members for preparing the annual county crop reports upon which this compilation is based.

¹ Totals vary slightly from totals published by counties due to classification differences between county and state reports.

² Totals may not add due to rounding.

NA Not available.

Note: Data for 2022 for Alameda, Contra Costa, Del Norte, Mendocino, Siskiyou, and Trinity counties was unavailable. Data for Alameda, Contra Costa, Mendocino, and Siskiyou counties was pulled forward from 2021. Data for Del Norte and Trinity counties are not included. San Francisco County had no agricultural production in 2022, and therefore is not included.

Note: Data for 2022 for Los Angeles County is withheld to avoid disclosure of individual operations. Data for 2022 for Alameda, Contra Costa, Del Norte, Mendocino, Siskiyou, and Trinity counties was unavailable. Data for Alameda, Contra Costa, Mendocino, and Siskiyou counties was pulled forward from 2021. Data for Del Norte and Trinity counties are not included. San Francisco County had no agricultural production in 2022, and therefore is not included.

Field Crops

The total value of California field crop production for 2022 was \$2.78 billion, up 4.9 percent from the prior year. Field crops with notable increases in value for 2022, as compared to the prior year, included Durum wheat, barley, safflower, cottonseed, dry edible beans, hay, and potatoes. Field crops with notable decreases in value for 2022, as compared to last year, included winter wheat, sunflowers, rice, and corn for grain.

Of the field crops that increased in value for 2022, as compared to the previous year, Durum wheat experienced the highest incline in value, rising 111 percent. Barley recorded the second highest increase in value at 77 percent above the previous year, and safflower recorded the third highest increase in value at 69 percent above the previous year.

The total value of all wheat in California increased by 22 percent from 2021 to 2022. Winter wheat production in the state declined to a record low of 153,300 tons in 2022, which represents a 31 percent decrease from the previous year. Conversely, Durum wheat recorded the largest increase in production among field crops, rising 75 percent above the prior year. A total of 380,000 acres of wheat were planted during 2022, of which 105,000 acres, or 28 percent of the planted acres, were harvested for grain. The 2022 price of wheat averaged \$350 per ton, which represents an increase of 26 percent from the previous year.

There were 40,000 acres of barley planted in 2022, unchanged from the previous year. Of the planted acres, 19,000 acres were harvested for grain, which represents an increase of 46 percent from 2021. Barley production was up 28 percent from the previous year to 25,080 tons in 2022, and the average price was up 38 percent from the previous year, to \$328.75 per ton.

California was the leading producer of safflower in the U.S. at 51,000 acres planted in 2022, which is an increase of 11,000 acres from the previous year. The 2022 average price of safflower was \$33.40 per cwt., up 27 percent from the previous year.

The total crop value for all hay increased in 2022 by nearly 21 percent from the prior year. During the year, 830,000 acres of hay were harvested in California, unchanged from the prior year. Additionally, for all hay in 2022, average yield per acre was down 14 percent, production was down 14 percent, and the average price per ton was up 45 percent, as compared to 2021. For alfalfa hay, total production decreased by 12 percent from the previous year to 3.2 million tons, and total value increased by 26 percent to \$1.12 billion. Production of hay (other than alfalfa) in California also decreased in 2022, dropping from 1.45 million tons in 2021 to 1.18 million tons. The total crop value of \$300 million for hay (other than alfalfa) was 4 percent higher than the prior year.

Of the field crops that decreased in value for 2022, as compared to the previous year, corn for grain experienced the sharpest decline in value, dropping 59 percent. While the average price per ton of corn for grain increased by 10 percent from the previous year, acres harvested and average yield per acre both decreased in 2022, down 60 percent, and 6 percent, respectively, compared to 2021. A total of 370,000 acres of corn were planted during 2022, of which 20,000 acres, a record low, were harvested for grain.

Planted and harvested acres of upland cotton recorded record lows in 2022, with 20,000 acres planted and 19,500 acres harvested in California. Production was 76,000 bales, down 25 percent from 2021. Planted and harvested acres of American-Pima cotton during the year were 116,000 acres and 115,000 acres, respectively. Production was 358,000 bales, up 32 percent from the previous years. Total cotton production in the state was 434,000 bales in 2022, with an average yield of 1,549 pounds per acre, which represents a 3 percent decline from the prior year.

Drought conditions in 2022 resulted in a significant decrease in acres of rice planted. During the year, a total of 256,000 acres of rice were planted in California, down 37 percent from 2021. Rice production in 2022 totaled 22.2 million hundredweight, which represents a 39 percent drop from the previous year. Medium-grain rice represented 86 percent of total rice acreage and 88 percent of total rice production in California. The average yield for all rice was estimated at 87.6 hundredweight per acre, down 3 percent from the record high yield for California of 90.5 hundredweight per acre recorded in 2021. In 2022, the average yield for medium-grain rice decreased by 2 percent, the average yield for long-grain decreased by 13 percent and the average yield for short-grain rice decreased by nearly 1 percent, compared to 2021.

Notable Increases in Production:

Wheat, Durum	75%
Safflower	33%
Cotton, American-Pima.....	32%
Barley	28%
Oats	20%
Haylage and Greenchop, All.....	18%
Cottonseed	18%

¹ Area planted includes preceding fall.

² Production is on a clean basis.

³ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

⁴ Includes varieties not listed separately. Excludes beans grown for garden seed.

⁵ Beginning in 2019, garbanzo beans are excluded.

⁶ Planted acreage is for all purposes.

⁷ Price and value derived from County Agricultural Commissioner data. Report from 2022 is not yet available.

⁸ Production ginned. Cotton bales are 480 lbs. net-weight.

⁹ Preliminary Marketing Year Average Price.

¹⁰ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

¹¹ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

¹² Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.

¹³ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

¹⁴ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

¹⁵ Estimates discontinued in 2019.

¹⁶ Includes sweet rice.

¹⁷ Excludes wild rice.

¹⁸ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.

Price and value of production for 2022 is not yet available.

D Withheld to avoid disclosure of individual operations.

NA Not available.

Floriculture

In 2022, California's floriculture crop ranked second in the nation behind Florida, with sales valued at \$958 million, comprising 14 percent of the total U.S. wholesale value. California sales decreased 0.4 percent from the 2021 value of \$962 million. The number of California floriculture producers decreased from 651 in 2021 to 530 in 2022.

For operations with more than \$100,000 in sales, California accounted for 7 percent of the total U.S. value of bedding and garden plants. The value of California-grown bedding and garden plants was \$254 million in 2022, which represents an increase of 6.8 percent from the 2021 value of \$238 million.

In 2022, California's potted flowering plants were valued at \$258 million, which was nearly identical to the year prior. California accounted for 23 percent of the total U.S. value of potted flowering plants.

California was the leading state in cut flower production in 2022, accounting for approximately 61 percent of the total U.S. cut flower wholesale value. The value of California's cut flower production during the year was \$204 million, which represents a 7.4 percent decrease from 2021.

Fruit and Nut Crops

California produced 14.7 million tons of fruits and nuts in 2022, accounting for 61 percent of the United States' total fruit and nut crop. The total value of all California fruits and nuts in 2022 was \$18.9 billion.

In the fruit category, California accounted for all U.S. production of kiwifruit, nectarines, olives, plums, and prunes. California also accounted for over 90 percent of the nation's lemons, mandarins, and grapes. For citrus fruit, California accounted for 62 percent of the total U.S. citrus production and 78 percent of the total value of the U.S. citrus crop in 2022, making it the largest citrus-producing state in the nation. In the nut category, California accounted for all of the nation's production of almonds, pistachios, and walnuts.

Grapes were the highest valued fruit or nut crop in California in 2022, totaling approximately \$5.5 billion in production value, representing an increase of 6.3 percent from the previous year. California was the leading producer of grapes nationwide, accounting for 93 percent of the total U.S. grape tonnage in 2022.

Almonds were the second highest valued fruit or nut crop in California in 2022, totaling \$3.5 billion in production value. This represents a 34.2 percent decrease in the production value of almonds from 2021 to 2022. California accounted for 84.6 percent of global almond production in 2022.

¹ Figures from 2020-21 and 2021-22 are from the Citrus Fruits Summary released in September 2022. Estimates may have been revised since this publication was released.

² Net weight per carton is 40 pounds for all citrus.

³ Equivalent packinghouse door returns.

⁴ Small quantities of processed grapefruit are included in fresh.

D Withheld to avoid disclosure of individual operations.

¹ Missing data not published to avoid possible disclosure of individual operations.

² Total processed includes canned, frozen, juice, and brined.

³ Small quantities processed included in fresh to avoid possible disclosure.

⁴ Estimates discontinued in 2018.

⁵ Includes substandard raisins diverted to other uses.

⁶ Processed and fresh fruit price not published to avoid possible disclosure, but included in total utilized.

⁷ Quantity and value include dried, but price excludes dried.

⁸ Processed mostly canned, but includes small quantities dried and other uses not published separately to avoid possible disclosure.

⁹ Processed mostly juice, but includes small quantities canned and other uses not published separately to avoid possible disclosure.

NA Not available.

D Withheld to avoid disclosure of individual operations.

Grape Crush

The 2022 crush totaled 3,670,861 tons, down 5.4 percent from the 2021 crush of 3,880,141 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 1,914,060 tons, down 5.9 percent from 2021. White wine varieties crushed totaled 1,482,793 tons, down 7.4 percent from 2021. Tons crushed of raisin type varieties totaled 106,237, down 23.0 percent from 2021, and tons crushed of table type varieties totaled 167,772, up 55.5 percent from 2021.

For the 2022 season, a total of 239,906 tons were crushed for concentrate production, accounting for 6.5 percent of the total grape crush for the year. The tables in this section include grapes crushed for concentrate production, but do not provide information by district, type, or variety.

The 2022 average price of all varieties was \$932.54 per ton, up 8.2 percent from 2021. Average prices for the 2022 crop by type were as follows: red wine grapes, \$1,185.40 per ton, up 10.4 percent from 2021; white wine grapes, \$689.45 per ton, up 2.1 percent from 2021; raisin grapes, \$309.50 per ton, up 6.2 percent from 2021; and table grapes, \$214.13 per ton, up 17.1 percent from 2021.

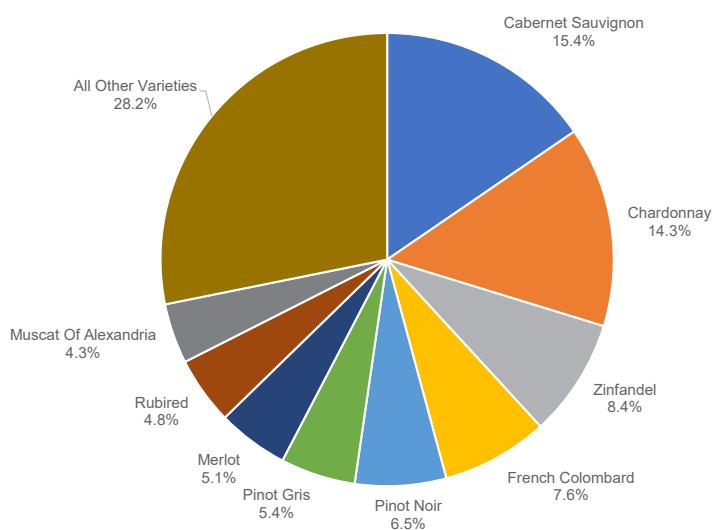

In 2022, Cabernet Sauvignon surpassed Chardonnay as the variety with the largest percentage of the total tonnage crushed at 15.4 percent. Chardonnay accounted for the second largest percentage of the total crush at 14.3 percent. Raisin grape varieties crushed for wine accounted for 2.9 percent of the total crush, and table grape varieties crushed for wine accounted for 4.6 percent of the total crush.

District 13 (Madera, Fresno, Alpine, Mono, Inyo Counties; and Kings and Tulare Counties north of Nevada Avenue (Avenue 192)), had the largest share of the state's crush at 1,165,226 tons. The average price per ton in District 13 was \$356.43. Grapes produced in District 4 (Napa County) received the highest average price at \$6,696.45 per ton, up 9.7 percent from 2021. District 3 (Sonoma and Marin

counties) received the second highest average price at \$2,834.55 per ton, up 5.5 percent from 2021.

The 2022 Cabernet Sauvignon average price of \$1,955.00 per ton was up 17.5 percent from 2021, and the Chardonnay average price of \$1,029.28 per ton was up 5.4 percent from 2021. The 2022 average price for French Colombard was \$328.57 per ton, up 1.2 percent from 2021, while the Zinfandel average price was up 1.7 percent from 2021, at \$658.12 per ton.

Leading Varieties Crushed Percentage of Total 2022 Crush

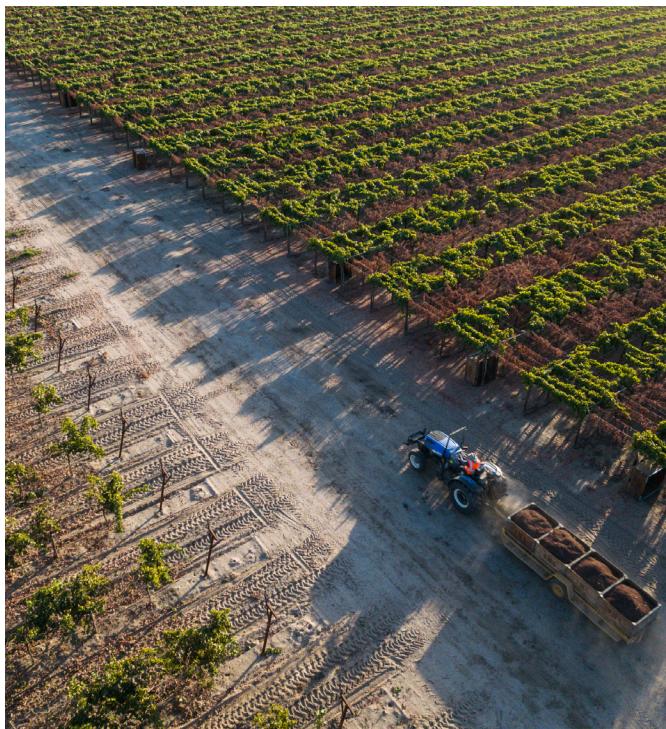

Grape Crush Report Overview

Information contained in the California Grape Crush Report and presented in this section was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Errata to the Final Grape Crush Report includes all grape tonnage crushed during the 2022 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 2023. The Errata to the Final Grape Crush Report, published on August 22, 2023, contains any late reports or corrections to the final report.

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code.

Livestock and Dairy

California's total livestock and livestock products cash receipts were \$17.4 billion in 2022, up 37.6 percent from 2021. All the major livestock categories showed an increase in cash receipts for the year. Poultry and eggs recorded the largest year-over-year increase at 74.1 percent. Dairy and dairy products accounted for 59.8 percent of the total livestock and livestock product receipts, while cattle and calves accounted for 20.8 percent of the state's total livestock receipts for 2022.

In 2022, California continued to lead the nation in total milk production with 41.8 billion pounds, representing a decrease of 0.2 percent from the previous year. Milk production per cow was down 0.3 percent from 2021, with an average annual yield of 24,267 pounds per cow. Total milk cow inventory for the state was 1,720,000 head on January 1, 2022, which represents no change from the inventory recorded at the beginning of 2021. The annual average milk price received by producers during 2022 was \$24.90 per hundredweight, which was \$6.80 per hundredweight more than the 2021 annual average price.

In 2022, California ranked first in the U.S. in nonfat dry milk, butter, mozzarella, and Hispanic cheese production. California produced 43.7 percent of the nation's nonfat dry milk, 33.3 percent of the nation's butter, and 17.5 percent of the nation's cheese during the year. Italian cheeses comprised 65.8 percent of the state's total cheese production. In 2022, California's Hispanic cheese production increased by 7.7 percent over the prior year. The production of nonfat dry milk in the state decreased by 4.0 percent during the year, compared to 2021. The state's butter production increased by 2.0 percent in 2022, compared to the previous year.

Total production of cattle and hogs was 2.33 billion pounds in 2022, up 2.4 percent from 2021. Total marketings of cattle and hogs rose by 4.0 percent during the year, from 2.59 billion pounds in 2021 to 2.70 billion pounds in 2022. Cattle and calf

marketings were 2.67 billion pounds, while hog and pig marketings accounted for 29.5 million pounds. Cattle and calves marketed from California feedlots totaled 660,000 head in 2022, which is 5,000 fewer head than in 2021. While cattle inventory remained unchanged in 2022 at 5,200 head, hog and pig inventory was up 3.7 percent during the year, compared to 2021.

California poultry and egg receipts for 2022 totaled \$2.66 billion. Total egg production in California decreased from 4.0 billion eggs in 2021 to 3.8 billion eggs in 2022, a 4.9 percent drop. The annual average price of eggs jumped from \$1.11 per dozen in 2021 to \$2.69 per dozen in 2022. Turkey production rose by 2.7 percent during the year to 196.5 million pounds in 2022. The liveweight equivalent price for turkey rose by \$0.25 per pound in 2022, compared to the prior year.

Wool production was 2.2 million pounds in 2022, up 40,000 pounds from the previous year. The total number of sheep and lambs shorn in 2022 decreased by 6.2 percent, compared to the prior year, to 380,000 head. Average wool production per animal was 5.9 pounds in 2022, with an average value of \$1.40 per pound. Total wool receipts were down 33.7 percent in 2022, compared to 2021. The total number of bee colonies was up 5.2 percent from the prior year, totaling 305,000 hives in 2022. Honey production was 11.6 million pounds in 2022, up 21.1 percent compared to 2021.

¹ Preliminary data.

² Excludes processed cheese and cottage cheese.

³ Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

⁴ Includes all cheeses not included in the above categories.

⁵ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

⁶ Frozen products in 1,000 gallons.

⁷ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink". Contains less than 10 percent milk-fat required for ice cream.

Vegetables and Melons

California remained the leading vegetable and melon producing state in 2022, accounting for 43 percent of U.S. planted acres, 60 percent of the nation's utilized production, and 59 percent of U.S. total value for the 25 selected vegetables and melon crops.

In 2022, California's vegetable and melon production recorded a total value of \$9.76 billion, up from \$7.21 billion in 2021. Lettuce remained the highest valued vegetable crop in California with a total value of production of \$3.1 billion, followed by tomatoes at \$1.5 billion.

Garlic saw the largest year-over-year increase in production of all the vegetable and melon crops in the state. Total garlic production in 2022 was 4.5 million cwt., up 28 percent from 2021. Garlic planted acres also increased to 26,000 acres in 2022, which represents a 5 percent increase compared to the prior year. In 2022, the total value of garlic was \$309 million, which represents a 50 percent increase over the previous season.

Both planted and harvested acres for processing tomatoes in California decreased by 1 percent compared to 2021. Total processing tomatoes production in 2022 was 10.5 million tons, which represents a decrease of 3 percent compared to the previous year. Processing tomatoes saw record-high prices in 2022, with value per unit increasing 32 percent between 2021 and 2022.

Vegetable and melon crops that recorded an increase in production were cabbage, cantaloupe, carrots, cauliflower, chili peppers, cucumbers, garlic, honeydew, leaf lettuce, Agaricus mushrooms processing onions, snap beans, spinach, squash, sweet corn, and watermelon. Crops that realized decreased production were artichokes, asparagus, bell peppers, broccoli, celery, fresh market tomatoes, head lettuce, fresh market onions, processing tomatoes, pumpkins, and Romaine lettuce.

Notable Increases in Production:

Garlic	28%
Sweet Corn	18%
Melons, Watermelon	17%
Snap Beans.....	16%
Lettuce, Leaf.....	15%
Spinach.....	14%
Onions, Processing.....	13%
Melons, Honeydew.....	12%
Mushrooms, Agaricus	12%

Notable Decreases in Production:

Asparagus	-40%
Pumpkins.....	-16%
Celery	-16%
Tomatoes, Fresh Market	-12%
Broccoli	-10%

¹ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

² Includes both fresh market and processed vegetables.

³ 2013 to 2015 data is for fresh market only, 2016 to 2022 data is for fresh and processed.

⁴ 2013 to 2022 data are not published to avoid disclosing data for individual operations.

⁵ Harvested area is in thousand square feet.

⁶ Primarily dehydrated and other processing. Production includes quantity harvested. "Total Value" equals production minus summer storage shrinkage and loss.

⁷ Included in summer storage onions.

D Withheld to avoid disclosure of individual operations.

NA Not available.

¹ On the basis of "paid for tonnage" purchased from growers as reported by processors, dockage not included.

² To avoid disclosure of individual operations, "Other Counties" includes Santa Clara and Tulare.

California Agricultural Exports

In 2022, California's agricultural exports totaled \$23.6 billion in value, representing an increase of 4.4 percent compared to the previous year. As shown in the table below, California's agricultural exports have trended upward over the past 10 years with total export value increasing by 9.6 percent since 2013.

California's top valued agricultural export commodity continues to be almonds, with \$4.7 billion in foreign sales in 2022. This figure represents an increase of 0.2 percent from the previous year. Dairy and dairy products ranked second in export value for the year at \$3.2 billion, a 35.8 percent increase from 2021. Pistachios and wine came in third and fourth, respectively, with pistachio exports valued at \$2.2 billion and wine exports valued at \$1.3 billion in 2022.

The principal 57 export commodities totaled \$20.0 billion in export value in 2022 and accounted for 84.8 percent of the total value of California's agricultural exports. Of the top 57 commodities exported, 16 showed an increase in export value of 5 percent or more, compared to the previous year, while 19 commodities experienced a decrease in export value of 5 percent or more.

California's share of total U.S. agricultural exports for 2022 was 12.8 percent, down from 13.6 percent in 2021. California's top 10 export destinations for 2022 – Canada, the European Union, China and Hong Kong, Japan, Mexico, South Korea, India, the United Arab Emirates, the Philippines, and Taiwan – accounted for 65.4 percent of the total 2022 export value. Of the top 10 export destinations, the Philippines experienced the largest year-over-year growth in total export value at 43.4 percent, followed

by the United Arab Emirates at 20.0 percent and Mexico at 18.8 percent.

Methodology

Data to compute agricultural exports are derived from official government sources, published industry sources and unpublished information from the government and the industry. Export quantities and values of the whole U.S. and California port districts are from the Department of Commerce trade data posted on the United States International Trade Commission online database (<http://dataweb.usitc.gov/>). Canadian import (value) data are from Strategis Canada's online database (<https://ised-isde.canada.ca/site/trade-data-online/en>). If the California export price is not available for a particular product, the U.S. average export price for that commodity is used in order to provide a dollar value for exports.

Production quantities and values are from various National Agricultural Statistics Service, Economic Research Service (ERS), and Agricultural Marketing Service publications. A share of the raw data provided in these United States Department of Agriculture (USDA) service publications are released as a preliminary report early in the calendar year followed by a more accurate final report released at a later date. For accuracy, The University of California Davis, California Agricultural Issues Laboratory (CAIL) export estimates use data from final USDA reports.

CAIL exports estimates use different methods from other sources, such as ERS. The ERS estimates are based on a state's national share of production of the exported commodity. The ERS method assumes that, for any particular commodity, a state's share of U.S. production

equals that state's share of U.S. exports. Other sources use geographic port data, without direct links to where the product originated. The CAIL export figures correspond to commodities that have been produced on farms and ranches within California. Products originated in another state and exported via California ports are not included in these statistics.

In most cases, CAIL reports exports at the individual commodity level. For instance, exports of a given fruit in fresh, canned, and dried forms are summed and listed under the name of the fruit, although the method for fresh fruit exports may differ from the method used for canned and dried fruit. The ratio of quantity exported to quantity produced is given on a farm weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA are applied.

California Agricultural Export Values, 2013-2022

Year	Export Value
	\$1 Billion
2022	\$23.61

Total All Agricultural Exports⁹		20,789	22,612	23,607	4.4	

¹ Total export values for each year are rounded to the nearest million dollars. More precise values are used in the percent change calculations.

² Export values for 2021 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ Export values for 2020 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

⁴ Hides and skins are included in the heading "Beef and Products".

⁵ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

⁶ "Total Principal Commodity" values for 2020 and 2021 were revised based on updates to USDA NASS production data.

⁷ "Total Other Products and Mixtures" is composed of (a) highly processed products that are difficult to attribute to a specific commodity such as mixtures of fruits, nuts and vegetables and other processed foods; (b) categories for which the listed item does not provide data on individual commodities and (c) animal and plant products marketed in such small quantities that they are not included in the top 57 leading commodities.

⁸ "Total Other Products and Mixtures" values for 2020 and 2021 were revised based on updates to USDA NASS production data.

⁹ "Total All Agricultural Exports" values for 2020 and 2021 were revised based on updates to USDA NASS production data.

Total Other Products and Mixtures⁴	105,509	3.2	115,320	3.1	-4.6
Total U.S. Agricultural Exports⁵	166,681	13.6	184,559	12.8	-5.9

¹ Hides and skins are included in the heading "Beef and Products".

² Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

³ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

⁴ Total other products and mixtures is equal to total U.S. agricultural exports minus total California principal commodity exports.

⁵ Total U.S. agricultural export values come from USDA. USDA defines agriculture to include: live animals, meat, and products of livestock, poultry, and dairy and products; hides and skins (but not leather products); animal fats and greases; food and feed grains and grain products; oilseeds and oilseed products; fruits, nuts, and vegetables and products of these; juices, wine, and maltbeverages (not distilled spirits); essential oils; planting seeds; raw cotton, wool, and other fibers (not manufactured products of these); unmanufactured tobacco (not manufactured tobacco products); sugar and sugar products; coffee, cocoa, tea, and products of these; rubber and allied products; and stock for nurseries and greenhouses, spices, and crude or natural drugs. Fish, shellfish, and forestry products are not included in "agriculture."

¹ This table shows destinations that receive shares of total exports greater than or equal to 5 percent of each commodity in either 2021 or 2022 for which reliable data are available. The commodities are listed by rank order, shown in parentheses, that corresponds to the 2022 ranking in the table: "California Agricultural Products Export Values and Rankings, 2020-2022".

² Accurate export destination data are only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are "Apples", "Chickens", "Eggs", "Mushrooms", "Seeds for Sowing", "Turkey" and "Wheat".

³ European Union estimates for 2021 and 2022 do not include the United Kingdom.

⁴ Hides and skins are included in the heading "Beef and Products".

⁵ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

¹ The EU-27 members to which California exports are shipped reflect only the initial destination of the product, not the EU country of consumption. Many products are distributed throughout the EU after the initial entry.

² "Other Principal Products" are those that individually account for less than \$100 million in export value to the EU.

³ Accurate export destination data is only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are "Apples", "Chickens", "Eggs", "Mushrooms", "Seeds for Sowing", "Turkey" and "Wheat". Totals may not equal due to rounding.

⁴ The other 17 EU members in 2022 include: Austria, Bulgaria, Cyprus, Croatia, Czech Republic, Estonia, Finland, Greece, Hungary, Ireland, Latvia, Luxembourg, Malta, Portugal, Romania, Slovak Republic, and Slovenia. These countries combined account for 5 percent of California agricultural exports to the EU in 2022.

⁵ The other 17 EU members in 2021 include: Austria, Bulgaria, Cyprus, Croatia, Czech Republic, Finland, Greece, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Portugal, Romania, Slovak Republic, and Slovenia. These countries combined account for 5 percent of California agricultural exports to the EU in 2021.

⁶ The United Kingdom officially separated from the European Union on January 31, 2020.

¹ Export quantities of processed goods were converted to farm fresh quantities using conversion factors published by USDA ERS (<https://www.ers.usda.gov/publications/pub-details/?pubid=41881>) or annual conversion factors published by USDA NASS in annual crop summaries.

² Quantities for 2021 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

³ Hides and skins are included in the heading "Beef and Products".

⁴ Farm quantity exported for "Dairy and Products" is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk, and whole dry milk to their fluid milk equivalents.

⁵ "Grapes, All" includes grape juice, raisins, table grapes, and wine.

⁶ "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

⁷ The weighted average is based on each of the 53 commodity's share of production value. Values for "Chickens", "Flowers and Nursery Products", "Mushrooms" and "Seeds for Sowing" are not included because reliable data on export quantity is not available.

Organics

California's organic agricultural industry plays an integral role in the state's economy. California leads the nation in the number of organic farms, land in organic production, and organic sales. According to the United States Department of Agriculture's (USDA) National Agricultural Statistics Service (NASS), California accounts for 36 percent of organic sales in the U.S. and organic sales continue to grow in the state¹. The California Department of Food and Agriculture's (CDFA) State Organic Program (SOP) is committed to upholding the integrity of products produced and sold in California as organic.

The SOP follows the USDA National Organic Program (NOP) guidelines and enforces the Organic Food Production Act of 1990 and the California Organic Food and Farming Act². The SOP assumes the NOP's oversight and enforcement authority in the state, and California is the only state in the nation with a NOP-authorized state organic program. The laws and regulations protect consumers, producers, handlers, processors, and retailers by establishing standards for agricultural products and foods that are labeled and/or sold as organic. The SOP's priorities are to protect the integrity of organic products produced and sold in California, while expanding outreach and education efforts to the organic community and the public. The SOP works to ensure that the organic food supply chain adheres to state and federal organic laws and regulations, so that California can maintain and continue to build consumer confidence in the organic industry.

The SOP also works in collaboration with industry leaders, representatives of the California Organic Products Advisory Committee, producers, handlers, processors, USDA Accredited Certifying Agencies (ACA), trade associations, county agricultural commissioners, and other organic industry stakeholders to continually improve the program.

California organic sales have increased by 18.2 percent from \$9.4 billion in 2018 to \$11.1 billion in 2022^{3,4}. Of the \$11.1 billion in organic gross sales in California during 2022, producer gross sales accounted for \$4,561,004,703, handler gross sales accounted for \$5,548,866,644, and processor gross sales accounted for \$1,024,586,574. California organic production site acreage have decreased by 4.0 percent from 1,909,400.67 acres in 2018 to 1,833,914.77 acres in 2022⁵.

This report presents the five-year trend of organic sales, organic operation types, and organic production site acreage from 2018 to 2022, and provides detailed information regarding organic commodity harvested acreage and organic commodity producers for 2022⁶. Highlights from the data indicate that total organic sales were reported at the highest level in 2021 at \$12,489,183,718, while total organic sales were reported at the lowest level in 2018 at \$9,421,532,301. Organic operation types were reported at the highest levels in 2021 and 2022 with 3,652 producers, 1,019 handlers, and 152 processors for 2021, and 3,582 producers, 1,075 handlers, and 166 processors for 2022, while organic operation types were reported at the lowest level in 2018 with 3,569 producers, 848 handlers, and 146 processors. Organic production site acreage was reported at the highest level in 2020 at 2,173,610.60 acres, while organic production site acreage was reported at the lowest level in 2022 at 1,833,914.77 acres.

Methodology

Through a process of registration, the SOP captures data related to production sites acreage, commodity harvested acreage, and gross sales for use in reporting to the organic industry, and for conducting enforcement activities of the SOP. The SOP registers every person engaged in the state of California in the production and handling of raw organic agricultural products, and processors and

handlers of processed organic meat, poultry, dairy products, and retailers engaged in processing or handling of products sold as organic. The SOP registers both operations certified by an ACA and operations exempt from certification with an ACA⁷.

Through the registration application process, operations are required to provide their total acreage per site/facility, which this report references as “production site acreage”. Additionally, operations are required to provide their harvested commodity acreage per county, which this report references as “commodity harvested acreage”. This allows the SOP to collect information for both organic production acreage and organic harvested acreage.

Data for gross sales for 2018 through 2022 is reported to the SOP by California SOP registrants, which includes USDA Certified Organic Operations and operations exempt from certification for organic producers, handlers, and processors.

Data for commodity harvested acreage per county is reported to the SOP by California SOP registrants from January 1, 2022 to December 31, 2022, and includes USDA Certified Organic producers and producers exempt from certification.

Data for commodity producers and production site acreage per county is reported to the SOP by California SOP registrants, and includes USDA Certified Organic producers and producers exempt from certification.

All statewide data is collected from the following SOP reports: 2018-2022 Gross Sales Reports, 2018-2022 Commodity Harvested Acreage per County Reports, 2018-2022 Commodity Producers per County Reports, and 2018-2022 Production Site Acreage by County Reports.

For the purposes of registration, organic products are reported in accordance with the following regulation-specified categories:

- 1) Citrus,
- 2) Fruits, excluding citrus: strawberries (fresh market); all other berries; pome fruit; stone fruit; grapes, table; grapes, wine; grapes dried, raisins; all other fruits,

3) Livestock or dairy: fluid milk, cow; all other dairy and dairy products; cattle, beef; chicken, broilers; chicken, layers; all other poultry/livestock and products,

- 4) Nuts: almonds; all other nut crops,
- 5) Vegetables: lettuce (head, leaf, spring/salad mixes); broccoli; carrots; spinach (fresh and processed); celery/celeriac; tomatoes; all other vegetables, and
- 6) Other, which includes, but is not limited to, apiculture, organic fallow ground, herbs, mushrooms, cut flowers, and nursery: propagation; seed crops; all other field crops (includes pasture and rangeland); all other not previously reported or listed; fallow.

The California Agricultural Statistic Review is a compilation of data from various sources including USDA NASS, USDA Economic Research Service, County Agricultural Commissioners, UC California Agricultural Issues Laboratory, and CDFA, each having a separate methodology. As such, there may be discrepancies when directly comparing data presented in this section to the data presented in another section of this report.

¹ USDA NASS 2019 Organic Survey (2017 Census of Agriculture Special Study).

² Formerly the California Organic Products Act of 2003.

³ This percentage change is calculated using the following total organic sales figures from the tables presented below: \$9,421,532,301 for 2018 and \$11,134,457,921 for 2022; “\$9.4 billion in 2018 to \$11.1 billion in 2022” are rounded figures.

⁴ 2018 organic sales figure is updated from previous reports with the most recent information made available.

⁵ 2018 production acreage figure is updated from previous reports with the most recent information made available.

⁶ 2018 – 2021 organic sales, organic operation types, and organic production acreage figures are updated from previous reports with the most recent information made available.

⁷ This report does not include differences between certified and exempt operations, as the percentages presented in the previous report did not yield significant differences.

¹ Producer is defined as the entity that engages in the business of growing or producing organic food, feed, or fiber.

² Statewide totals include data withheld from individual counties to avoid disclosure of individual operations.

D Withheld to avoid disclosure of individual operations. Represents counties with five or less operations.

Note: Broad variances in data from year-to-year may be attributed to singular or few operations that are highly representative in organic sales.

Lettuce (Head, Leaf, Spring/Salad Mixes)	43,706.34	762
Almonds	41,058.71	271
Grapes, Wine	34,187.28	595
All Other Fruit Crops ⁴	27,066.65	1,184
Citrus	25,100.07	1,088
Spinach (Fresh and Processed)	24,999.58	538
Seed Crops	21,134.76	249
Carrots	20,510.80	581
All Other Nut Crops ⁵	17,672.10	436
Broccoli	16,161.15	695
Tomatoes	14,991.04	837
Grapes, Table	12,897.87	257
Stone Fruit	12,393.43	636
All Other Not Previously Reported or Listed ⁶	12,022.90	328
All Other Berries ⁷	9,973.84	536
Grapes Dried, Raisins	8,706.38	117
Strawberries (Fresh Market)	6,741.28	562
Celery/Celeriac	6,216.71	545
Propagation	4,747.80	150
Chicken, Broilers ¹	4,403.04	70
Pome Fruit	4,082.90	409
Chicken, Layers	3,712.27	140
All Other Dairy and Dairy Products ^{1,8}	2,028.40	19
All Other Poultry/Livestock and Products ^{1,9}	1,398.28	97
Statewide Total¹⁰	2,322,796.34	13,828

¹ "Harvested acreage" for livestock and dairy products refers to the area utilized for production of these commodities.

² All other field crops includes all other field crops including pasture and rangeland.

³ All other vegetables includes all other vegetables except for broccoli, carrots, celery/celeriac, lettuce (head, leaf, spring/salad mixes, spinach (fresh and processed), and tomatoes.

⁴ All other fruit crops includes all other fruit crops except for citrus, grapes (table), grapes (wine), grapes dried (raisins), pome fruit, stone fruit, strawberries (fresh market), and all other berries.

⁵ All other nut crops includes all other nut crops except for almonds.

⁶ All other not previously reported or listed includes any crop that falls outside of the the other catagories.

⁷ All other berries includes all other berries except for strawberries.

⁸ All other dairy and dairy products include all other dairy products except for fluid milk (cow).

⁹ All other poultry/livestock and products include all other poultry/livestock and products except for cattle (beef), chicken (broilers), and chicken (layers).

¹⁰ Statewide total producer count represents the total production count per commodity. The total producer count in this table is not representative of individual producer operations, as operations may produce one or more commodities.

¹ Producer count represents the production count per commodity. Producer count in this table is not representative of individual producer operations, as operations may produce one or more commodities.

² All other berries includes all other berries except for strawberries.

³ All other dairy and dairy products include all other dairy products except for fluid milk (cow).

⁴ All other field crops includes all other field crops including pasture and rangeland.

⁵ All other fruit crops includes all other fruit crops except for citrus, grapes (table), grapes (wine), grapes dried (raisins), pome fruit, stone fruit, strawberries (fresh market), and all other berries.

⁶ All other nut crops includes all other nut crops except for almonds.

⁷ All other poultry/livestock and products include all other poultry/livestock and products except for cattle (beef), chicken (broilers), and chicken (layers).

⁸ All other vegetables includes all other vegetables except for broccoli, carrots, celery/celeriac, lettuce (head, leaf, spring/salad mixes, spinach (fresh and processed)), and tomatoes.

⁹ All other not previously reported or listed includes any crop that falls outside of the the other catagories.

D Withheld and moved to the end of each section to avoid disclosure of individual operations. Represents counties with five or less producers.

Statewide Organic Harvested Acreage and Organic Commodity Producer Count by County, 2022

¹ Producer count represents the production count per commodity. Producer count in this table is not representative of individual producer operations, as operations may produce one or more commodities.

² All other fruit crops includes all other fruit crops except for citrus, grapes (table), grapes (wine), grapes dried (raisins), pome fruit, stone fruit, strawberries (fresh market), and all other berries.

³ All other vegetables includes all other vegetables except for broccoli, carrots, celery/celeriac, lettuce (head, leaf, spring/salad mixes), spinach (fresh and processed), and tomatoes.

⁴ All other not previously reported or listed includes any crop that falls outside of the the other categories.

⁵ All other berries includes all other berries except for strawberries.

⁶ All other field crops includes all other field crops including pasture and rangeland.

⁷ All other nut crops includes all other nut crops except for almonds.

⁸ All other poultry/livestock and products include all other poultry/livestock and products except for cattle (beef), chicken (broilers), and chicken (layers).

⁹ All other dairy and dairy products include all other dairy products except for fluid milk (cow).

D Withheld and moved to the end of each section to avoid disclosure of individual operations. Represents commodities with five or less producers.

¹ Statewide totals include data withheld from individual counties to avoid disclosure of individual operations.

D Withheld to avoid disclosure of individual operations. Represents counties with five or less operations.

Note: Broad variances in data from year-to-year may be attributed to singular or few operations that are highly representative in organic acreage. Variances in organic acreage trends year-to-year may differ from variances in conventional acreage trends for a variety reasons. As such, trend analysis should consider organic-specific factors when analyzing organic acreage trends such as cost, consolidation, or other contributing factors.
