WaveLinx PRO Node enabled luminaires (-WPN-) available now

Cooper Lighting Solutions is pleased to announce new WaveLinx PRO Node (-WPN-) enabled luminaires. The WaveLinx PRO Node is the ideal solution for designers who want to offer individual wireless fixture control without compromising the aesthetics of their preferred Cooper Lighting Solutions fixture.

The WaveLinx PRO Node is a wireless, integral fixture controller that communicates wirelessly with other WaveLinx PRO devices and the WAC. The node is powered by a 0-10V Dim to Off driver with Aux power and comes with two (2) 0-10V output channels making it an ideal solution for standard static white and Vividtune® tunable white fixtures where one output channel controls the fixture's intensity and the other controls the color temperature. The WaveLinx PRO node provides flexibility in scene and zone configuration and can be used in conjunction with other WaveLinx PRO devices such as PRO ceiling sensors, WaveLinx enabled luminaires with PRO Integrated sensors and PRO Wallstations.

How to Order

New option in fixture ordering logic "**WPN** = WaveLinx PRO Wireless Node without sensor"

WaveLinx PRO Node enabled fixtures features/benefits:

- **Wireless communication:** Enables Luminaire-level lighting control (LLLC)
- **In-fixture installation of the node:** Wireless control without impacting fixture aesthetics
- **Two channel output:** Simplifies the wiring and maintenance of tunable white applications
- **WaveLinx PRO compatible:** Continually upgraded, unlocking new system features and capabilities as they are released

Luminaire with Wireless Node
Highly efficient LED fixtures

WaveLinx Area Controller
Provides centralized coordination of multiple area control options

Wireless Wall Station/Receptacle
Provides customized wireless control of each area

Mobile Applications
Provides personalized, local control from a tablet or smartphone
