ABSTRACT

----SPECIAL REQUESTS FOR ARCHIVE:-----

1. Please turn off calibration for the COS/FUV exposures.
2. Please disassociate all exposures. SQL is used to meet the above requests.

In case 1 qexposure.control_id is modified. In case 2 qassociation records are deleted. Please see G. Chapman/M. Reinhart.

This program is designed to verify acquisition parameters at LP5 and to produce spectra at several regions on the detector that would normally be used for target acquisition, but for which data are not downlinked as part of the acquisition process. The idea is that if anything does go wrong with the acquisition tests we will have maps of the detector that we can then use for diagnostics. These images also produce an additional check of the detector plate scale after the aperture placement and focus enabling programs are done.

The program uses fictitious offset targets to nod the telescope away from a centered target and then test the re-acquisition. Because these displacements need to happen along the AD and XD detector direction and target offset coordinates must be entered in RA and DEC, the ORIENT angle for each visit must be restricted to +/- 0.5 degrees, which also means a date range restriction. The date ranges and ORIENT restrictions for each visit are described in the program description. The program is modeled after the LP4 version of this program: 14907. It uses targets AZV18 for visits 1, 2, and 3, and target WD1657+343 for visit 4.

Prior to the submission of this program all LP5 SIAF, aperture mechanism positions, TA subarray, and foci must have been installed.

There is no special commanding in this program.

OBSERVING DESCRIPTION

----SPECIAL REQUESTS FOR ARCHIVE:-----

1. Please turn off calibration for the COS/FUV exposures.
2. Please disassociate all exposures. SQL is used to meet the above requests.

In case 1 qexposure.control_id is modified. In case 2 qeassociation records are deleted. Please see G. Chapman/M. Reinhart.

Details of the overall program are described in the abstract and details on individual observations are described at the visit level. A copy of the abstract is entered here.

This program is designed to verify acquisition parameters at LP5 and to produce spectra at several regions on the detector that would normally be used for target acquisition, but for which data are not downlinked as part of the acquisition process. The idea is that if anything does go wrong with the acquisition tests we will have maps of the detector that we can then use for diagnostics. These images also produce an additional check of the detector plate scale after the aperture placement and focus enabling programs are done.

The program uses fictitious offset targets to nod the telescope away from a centered target and then test the re-acquisition. Because these displacements need to happen along the AD and XD detector direction and target offset coordinates must be entered in RA and DEC, the ORIENT angle for each visit must be restricted to +/- 0.5 degrees, which also means a date range restriction. The date ranges and ORIENT restrictions for each visit are as follows:

VIST	DATE RANGE	ORIENT
1	11/16/20 to 11/22/20	153 degrees
2	01/03/21 to 01/10/21	90
3	03/01/21 to 03/09/21	150
4	10/01/21 to 10/02/21	70 (Changed to 74.5 on Bill J's request due to guide star issue. virtual targets for visit 4 updated.)

The offset targets used in different dates have been defined according to the COS ORIENT parameters, Phase II instructions section 6.2.2. From there we derive:

$\Delta(\text{dec}) = \Delta(\text{AD}) \cdot \cos(\text{ORIENT} - 45) + \Delta(\text{XD}) \cdot \cos(\text{ORIENT} - 135)$ will yield the result in arcseconds, which is what APT wants.

$\Delta(\text{RA}) = (\Delta(\text{AD}) \cdot \sin(\text{ORIENT} - 45) + \Delta(\text{XD}) \cdot \sin(\text{ORIENT} - 135)) / (3600 \cdot \cos(\text{dec}))$ will yield the result in decimal degrees of RA, which is what APT wants.

In all cases, a test consists of:

- 1 - Acquire the target with a NUV ACQ/IMAGE, so it is centered.
- 2 - Take a centered spectrum for comparison.
- 3 - Use POSTARG to take spectrum at the detector placements where acquisition spectra will be taken because these acquisition spectra are not downlinked.
- 4 - Use a fictitious target to generate an offset from the real target and run the acquisition.
- 5 - Take another spectrum to compare the result of the acquisition to the original spectrum.

The structure of the program is as follows, and detailed explanations are at the visit level:

Visit 1: testing ACQ/SEARCH

Visit 2: testing PEAKD

Visit 3: testing PEAKXD

Visit 4: Testing all FUV ACQ modes as the default on the first day of LP5 as the default, October 1, 2021

The program is modeled after the LP4 version of this program: 14907. It uses targets AZV18 for visits 1, 2, and 3, and target WD1657+343 for visit 4.

In all cases we use the G130M/1291 cenwave because it is the cenwave with the widest profile for which observations are allowed in grating G130M. That profile will therefore cover the width in the detector covered by the other exposures.

Prior to the submission of this program all LP5 SIAF, aperture mechanism positions, TA subarray, and foci must have been installed.

There is no special commanding in this program.

Proposal 16432 - ACQ/SEARCH TEST (01) - COS LP5 FUV Target Acquisition Enabling and Verification

Wed Sep 29 17:01:29 GMT 2021

Visit	<p>Proposal 16432, ACQ/SEARCH TEST (01), completed</p> <p>Diagnostic Status: Warning</p> <p>Scientific Instruments: COS/FUV, COS/NUV</p> <p>Special Requirements: SCHED 100%; ORIENT 152.9D TO 153.1 D; BETWEEN 28-FEB-2021:00:00:00 AND 09-MAR-2021:00:00:00</p> <p>Comments: ACQ/SEARCH Test. The target is AVZ18 (the SMOV TA target). 1-orbit.</p> <p>For a 3x3x1.1" spiral pattern, the telescope slew is [AD,XD]</p> <pre> 0.00 0.00 1.10 0.00 1.10 1.10 0.00 1.10 -1.10 1.10 -1.10 0.00 -1.10 -1.10 0.00 -1.10 1.10 -1.10 </pre> <p>We want the ~same S/N for each spectrum in the pattern, the arms of the central cross are at 1.1" offset, the corners are $\sqrt{2} * 1.1$". The centered count rate is ~ 2350 counts/s. The throughput at 1.1" offset is 58.1% of center, whereas at 1.55" it is 28.6% To be balanced, we'll use 22 sec for the sides, and 44s for the corners. This should be FUVa/B total counts of 45k counts/segment for each.</p> <p>The ORIENT angle is constrained to 40.5 degrees +/- 0.5 degree. First we use pos-targs to simulate the 3x3x1.1" pattern, taking TAGFLASHed spectra at each location. We then perform a 3x3x1.1" ACQ/SEARCH on the centered target. We then offset the target 1" in XD and 1" in AD and perform a 3x3x1.767" ACQ/SEARCH and then a 2x2x1.767" ACQ/SEARCH on the target.</p> <p>The data range for this visit is from 15 NOV 2020 to 23 NOV 2020.</p>

Proposal 16432 - LP 5 Integration Test (04) - COS LP5 FUV Target Acquisition Enabling and Verification

9	G130M/129 1 spectrum (COS.sp.146 4645)	(61) WD1657+343- OFFSET+0.7AD+0. 7XD	COS/FUV, TIME-TAG, PSA	G130M 1291 A	FP-POS=3; BUFFER-TIME=31 6; LIFETIME-POS=D EF	Sequence 5-9 Non-Int in LP 5 Integration Test (04)	25.0 Secs (31 Secs) [==>31.0 Secs]	[1]
<i>Comments: Spectrum for verification after FUV ACQ/SEARCH, PEAKXD and PEAKD centering. This spectrum should be as well centered as the one after the NUV acquisition.</i>								
10	PEAKXD test offset -0.3 5 on detector r (COS.sa.146 4672)	(62) WD1657+343- OFFSET+0.7AD+1. 05XD	COS/FUV, ACQ/PEAKXD, PSA	G130M 1291 A	LIFETIME-POS=D EF	Sequence 10-11 Non-Int in LP 5 Integration Test (04)	2 Secs (2 Secs) [==>]	[1]
<i>Comments: It thinks we were at (0.7, 0.7) on the sky, and centered on the detector. Now go to (0.7, 1.05) on the sky, meaning going down to 0.35 in XD in the detector and re-acquire.</i>								
11	G130M/129 1 spectrum (COS.sp.146 4645)	(62) WD1657+343- OFFSET+0.7AD+1. 05XD	COS/FUV, TIME-TAG, PSA	G130M 1291 A	FP-POS=3; BUFFER-TIME=31 6; LIFETIME-POS=D EF	Sequence 10-11 Non-Int in LP 5 Integration Test (04)	25.0 Secs (31 Secs) [==>31.0 Secs]	[1]
<i>Comments: Spectrum for verification after PEAKXD.</i>								
12	PEAKD test offset +0.5 on detector (COS.sa.146 4672)	(63) WD1657+343- OFFSET+1.05AD+1 .05XD	COS/FUV, ACQ/PEAKD, PSA	G130M 1291 A	LIFETIME-POS=D EF; STEP-SIZE=0.9	Sequence 12-13 Non-Int in LP 5 Integration Test (04)	2 Secs (2 Secs) [==>]	[1]
<i>Comments: ; It thinks we are starting from (0.7, 1.05). Moving to 0.7 in XD puts the target at +0.35 in the detector and then reacquires.</i>								
13	G130M/129 1 spectrum (COS.sp.146 4645)	(63) WD1657+343- OFFSET+1.05AD+1 .05XD	COS/FUV, TIME-TAG, PSA	G130M 1291 A	FP-POS=3; BUFFER-TIME=31 6; LIFETIME-POS=D EF	Sequence 12-13 Non-Int in LP 5 Integration Test (04)	25.0 Secs (31 Secs) [==>31.0 Secs]	[1]
<i>Comments: Spectrum for verification after FUV PEAKD centering.</i>
