ABSTRACT

Perform routine monitoring of FUV XDL detector dark rate. The main purpose is to look for evidence of a change in the dark rate, both to track on orbit time dependence and to check for a detector problem developing. Variations of count rates as a function of orbital positions will be analyzed to study the effect of SAA. Stacked images will help us study the spatial distribution of dark rates on the detector

OBSERVING DESCRIPTION

Monitor the FUV detector dark rate by taking TIME-TAG science exposures with no light on the detector. Five times every week a 22-min exposure is taken with the FUV detector with the shutter closed. The length of the exposures is chosen to make them fit in Earth occultations.

The HV values are cycled randomly for two sets of 3 visits each week. The FUV A HV values are cycled through 163, 173, and 178 while the FUV B values are cycled through 163, 169, and 175.
