

Notification of further positive HPAI results in wild mammalian species (UK)
(7 August 2023)

More positive HPAI results in samples from wild non-avian species, reporting under Article 1.1.5. as there was no suspicion of Avian Influenza at the time of collection:

- The wild animals were found dead and sampled as part of wildlife scanning surveillance, with no suspicion of infection with HPAI at the time of collection.
- Two positive finding of HPAI H5N1 in a wild fox. The foxes were collected together with dead wild birds and sampled for HPAI..

Species	Latin name	Location	Date collected	Date tested	Outcome
RED FOX	<i>Vulpes vulpes</i>	Causeway Coast and Glens, Northern Ireland	25/07/2023	28/07/2023	1 X HPAIV H5N1
