

# On the Effects of GATT/WTO Membership on Trade:

---

**They are Positive and  
Large After All**

M. Larch

J.-A. Monteiro

R. Piermartini

Y. V. Yotov

# Spoiler alert!

- Previous studies have underestimated the impact of GATT/WTO membership by ignoring the non-discriminatory nature of GATT/WTO
- On average, GATT/WTO membership has increased:
  - trade between members by 171%
  - trade between members and non-members by about 88%
- Weakening or moving away from the multilateral trading system may have larger adverse consequences than previously estimated

# Motivation

---

## Beyond tariff reductions

# Advanced Trade Policy Guide: The Structural Gravity Model

- Chapter 1: Partial Equilibrium Gravity
- Chapter 2: General Equilibrium Gravity

Structure of each chapter:

A. Learning objectives

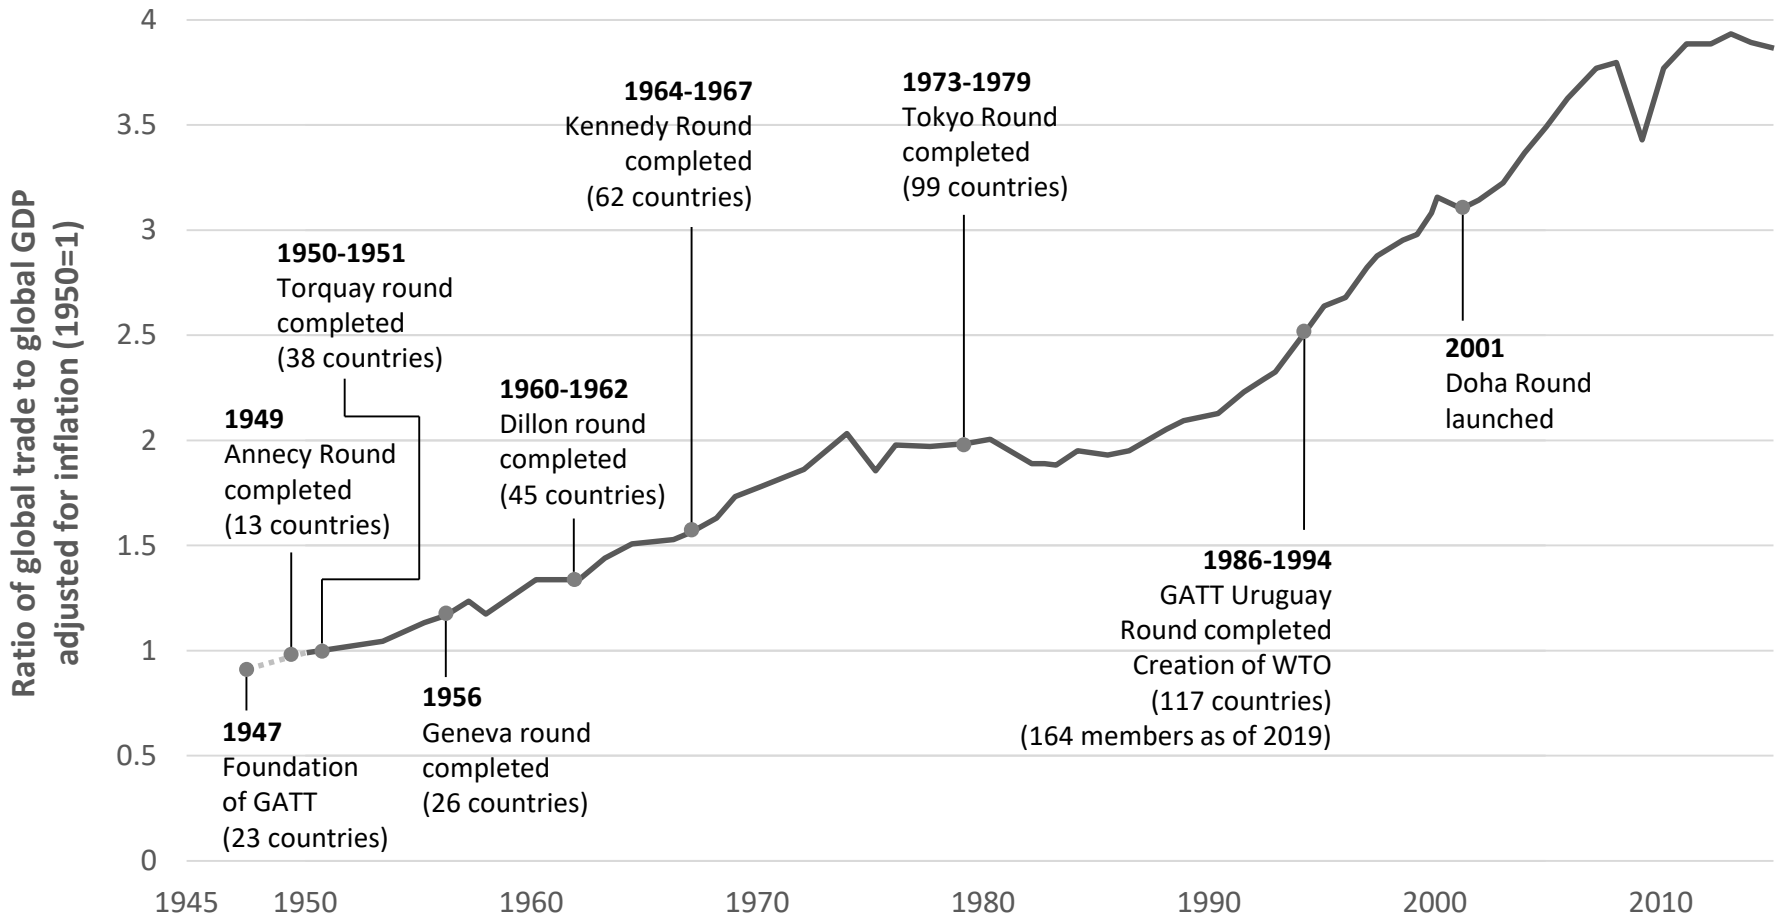

B. Analytical tools

C. Applications

D. Exercises ←

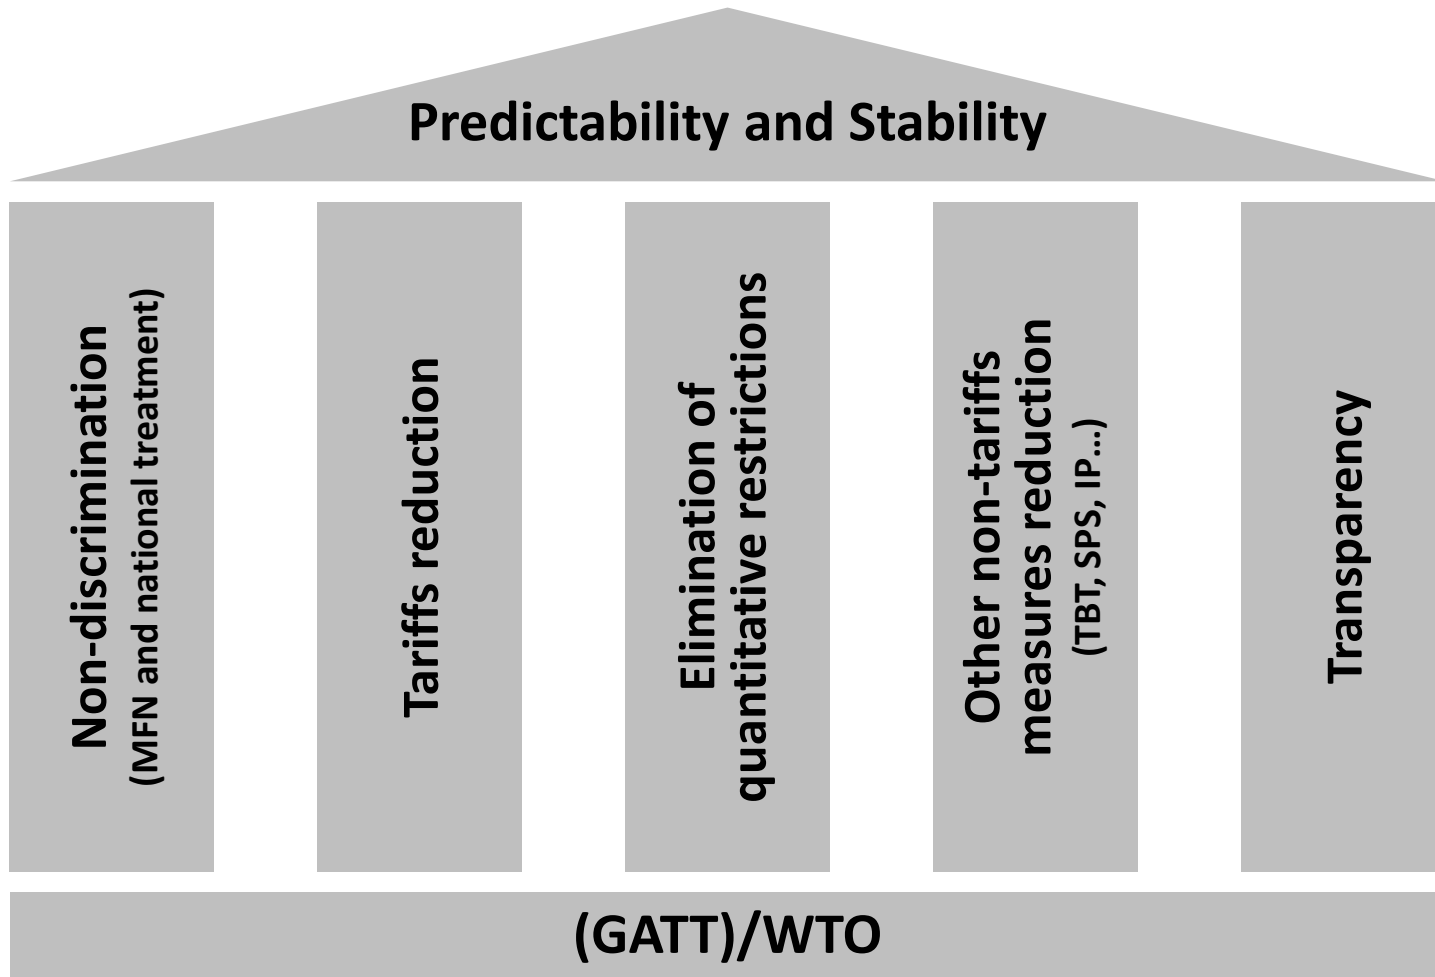

# Long and steep path to freer trade

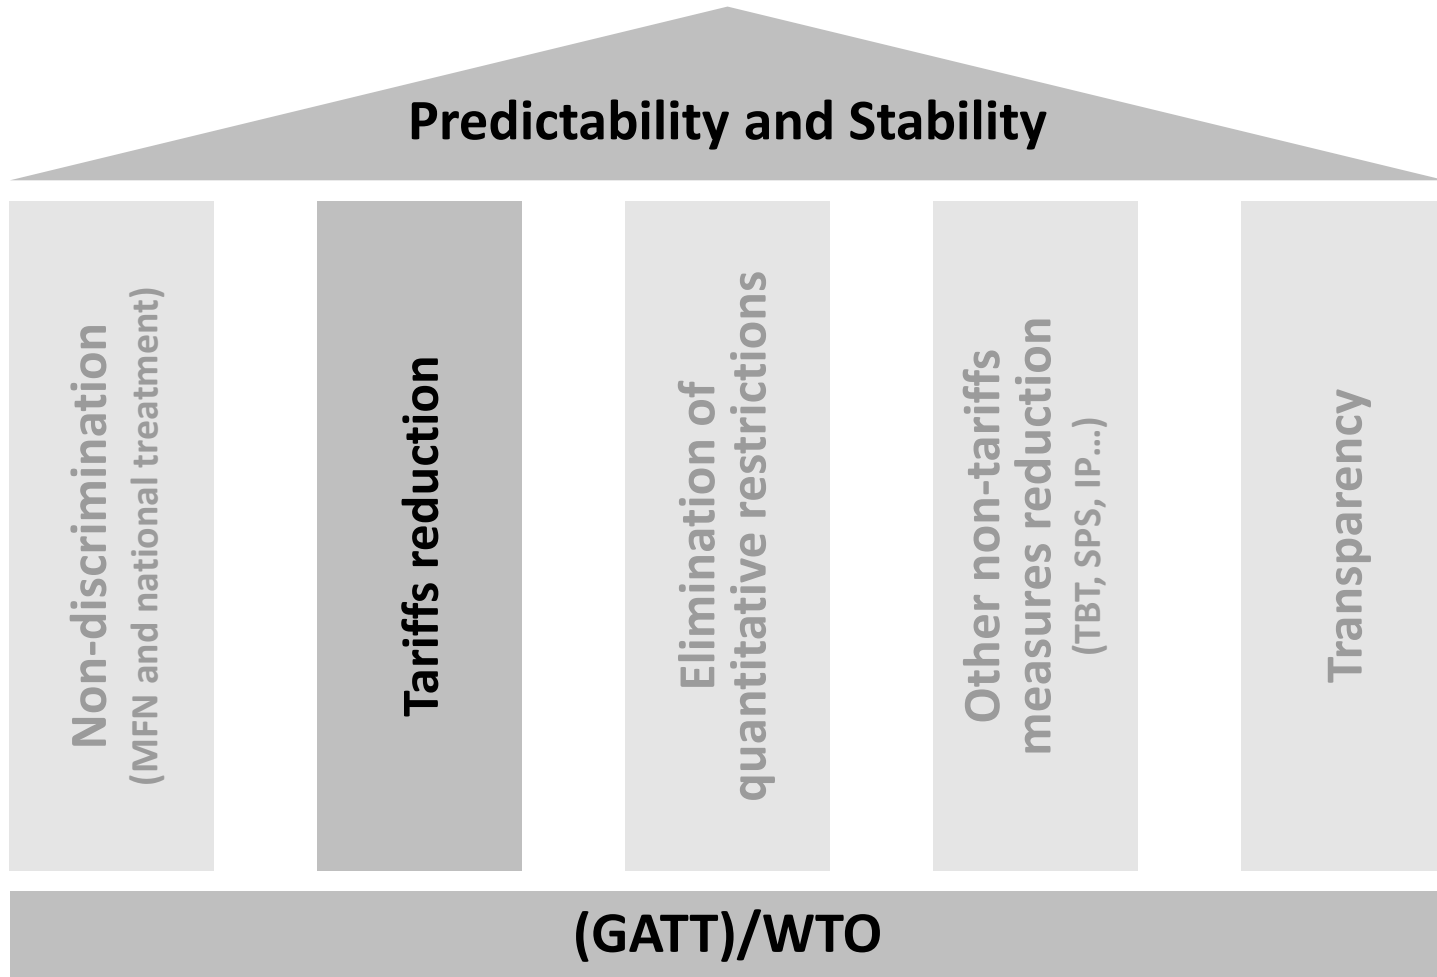

Source: Adjusted from WSJ (2015)

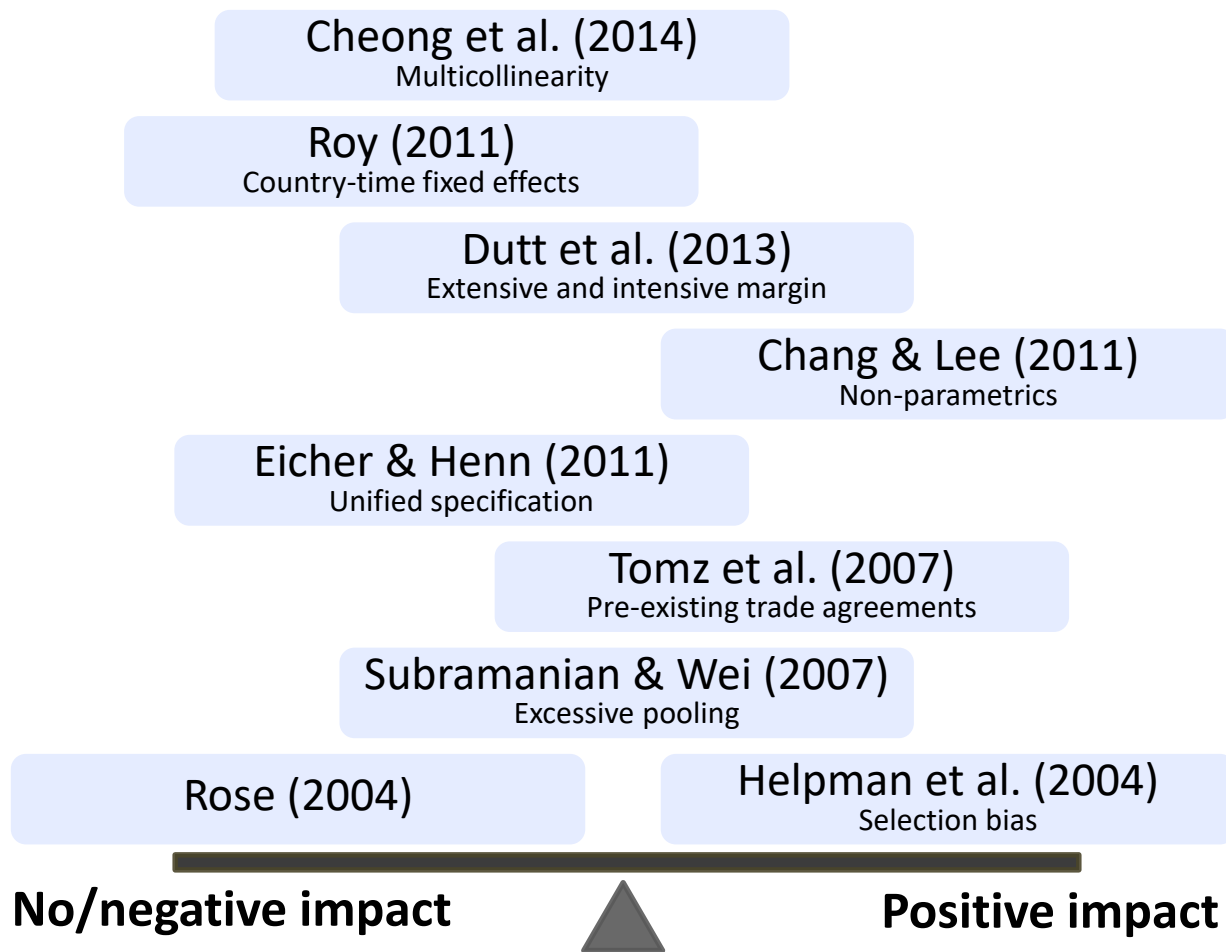

# GATT/WTO not just about tariff reduction...

# ...Yet public good nature of GATT/WTO commitments ignored or not identified

# Evidence on GATT/WTO membership is mixed

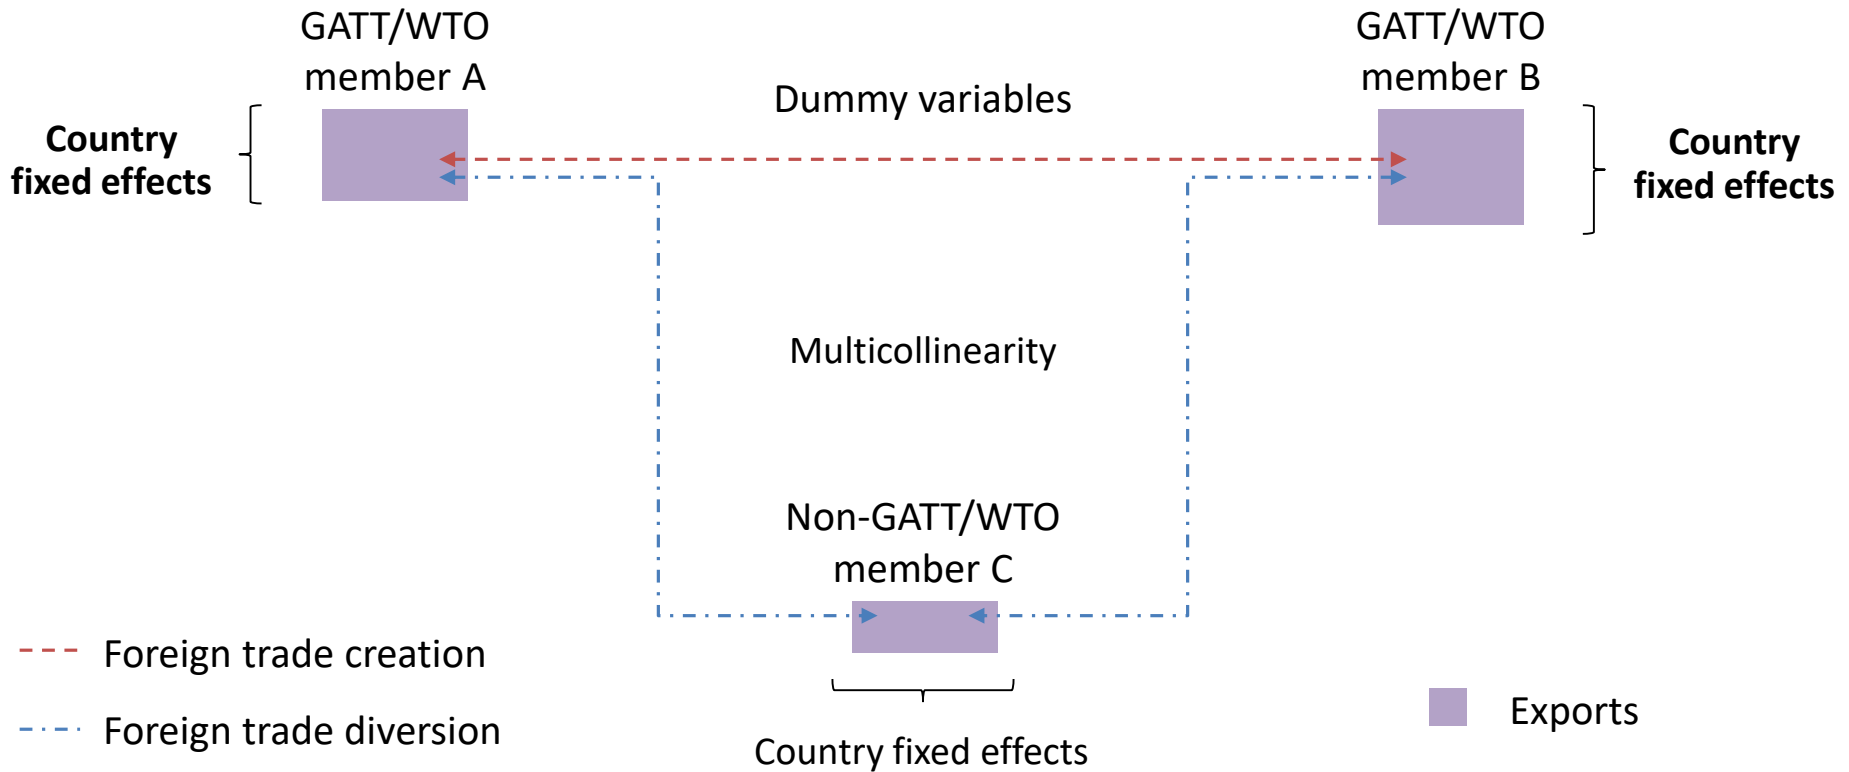

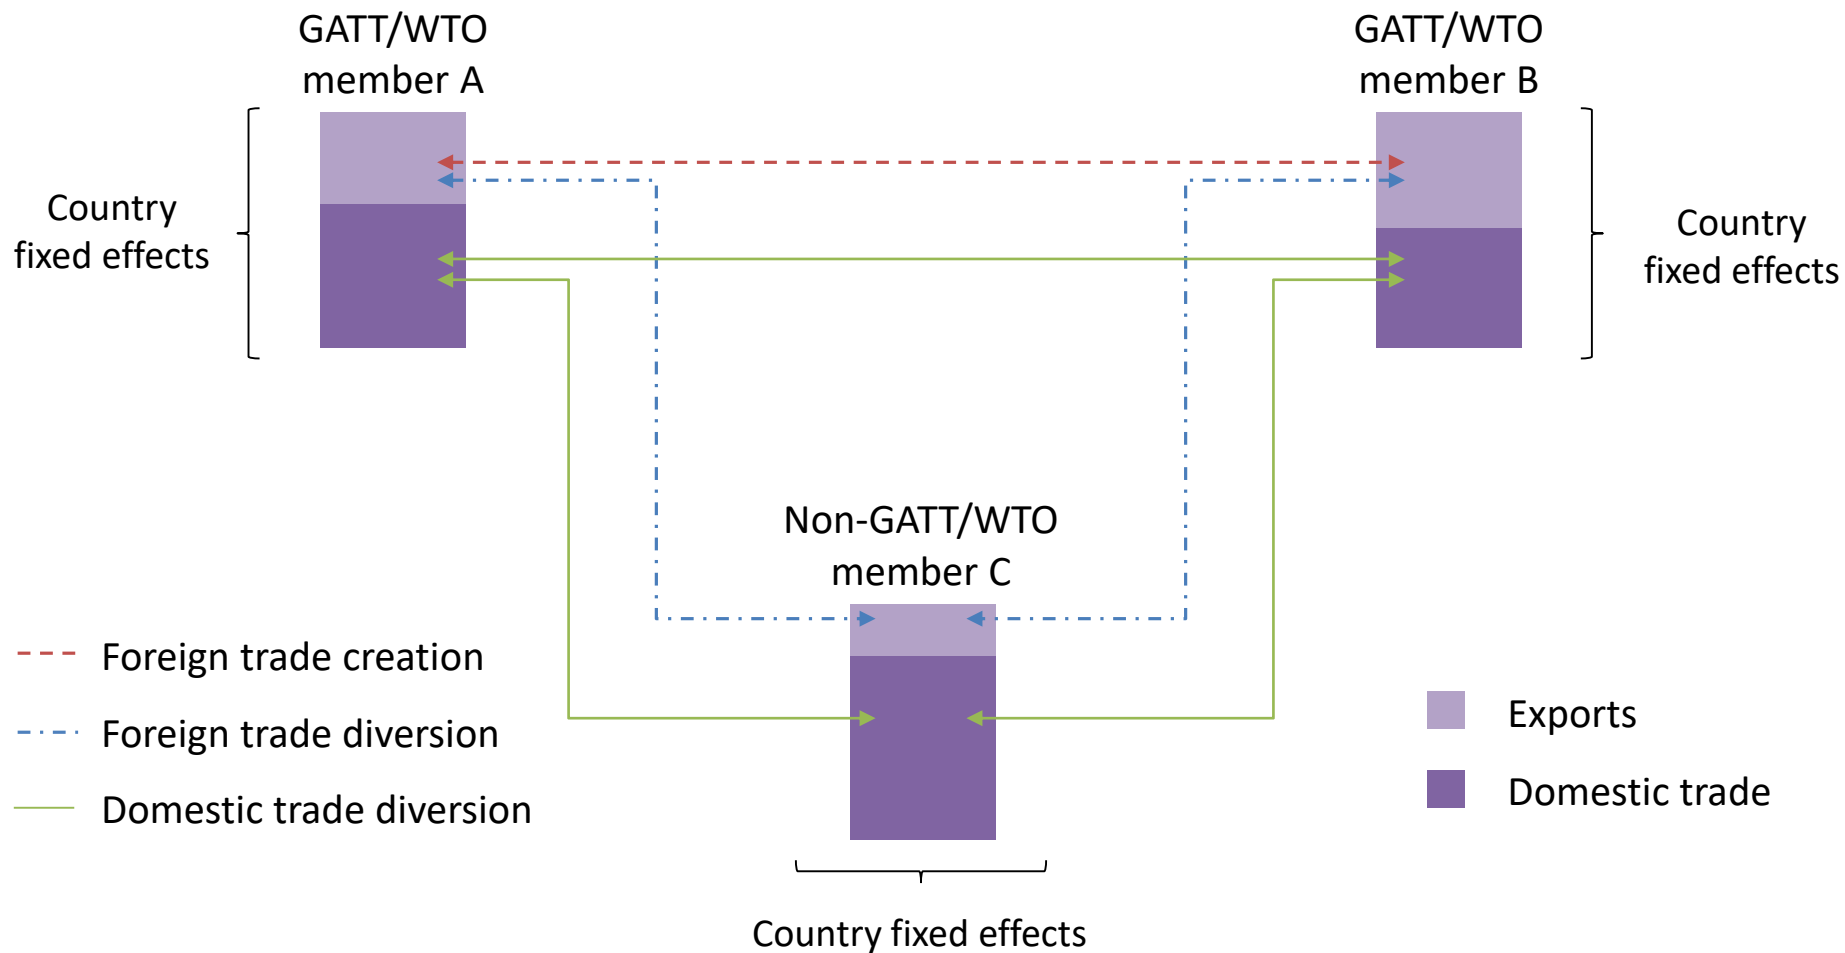

# Focus of bilateral impact of GATT/WTO on exports ...

# ...but public good nature of GATT/WTO ignored or not identified

# Solution: Including domestic trade in the analysis

# Two contributions to the literature

- Identification for the first time of the effects of GATT/WTO membership on international trade relative to domestic sales

- Failure to account for the public good nature of GATT/WTO, including reduction in trade policy uncertainty, may lead to severe biases in gravity estimations of the impact of GATT/WTO membership

# Structural Gravity Model

---

Accounting for public good  
feature of GATT/WTO

# Structural Gravity Model

**Structural gravity equation:**

$$X_{ij} = \frac{E_j \times Y_i}{Y} \times \left( \frac{t_{ij}}{P_j \times \Pi_i} \right)^{1-\sigma} \quad i, j = 1 \dots N \text{ countries}$$

**Multilateral Resistance Terms:**  
(MRT)

$$P_j^{1-\sigma} = \sum_i \left( \frac{t_{ij}}{\Pi_i} \right)^{1-\sigma} \times \frac{Y_i}{Y}, \quad \Pi_i^{1-\sigma} = \sum_j \left( \frac{t_{ij}}{P_j} \right)^{1-\sigma} \times \frac{E_j}{Y}$$

(Outward MRT) (Inward MRT)

where  $X_{ij}$ : trade flows from exporter  $i$  to destination  $j$

$Y_i = \sum_j X_{ij}$ : output in country  $i$

$E_j$ : total expenditure at destination  $j$

$t_{ij} > 1$ : trade frictions for shipping goods from  $i$  to  $j$

$\sigma > 1$ : constant elasticity of substitution

# Capitalization on latest developments in empirical structural gravity literature

- **Intra-national and international trade flows data**
  - Consistent with gravity theory
  - Identification of bilateral policies and non-discriminatory policies
- **Time-exporter and time-importer fixed effects**
  - Control for multilateral resistance terms
- **Country-pair fixed effects**
  - Control for endogeneity of trade policies
  - Control for all time-invariant bilateral trade costs
- **Poisson Pseudo Maximum Likelihood estimator**
  - Control for heteroscedasticity
  - Control for zero-trade flows

# Structural Gravity Model Specification with Domestic Trade

$$X_{ij,t} = \exp[\alpha_0 + \alpha_1 ONE\_GATTWTO_{ij,t} + \alpha_2 BOTH\_GATTWTO_{ij,t}] \\ \times \exp[\mathbf{GRAV}_{ij,t} \Psi_{ij,t} + \mu_{ij} + \pi_{i,t} + \chi_{j,t}] + \varepsilon_{ij,t}$$

where  $ONE\_GATTWTO_{ij,t} \equiv GATTWTO_{i,t} \times BRDR_{ij,t}$

$GATTWTO_{i,t}$ : 1 if country  $i$  is GATT/WTO member; 0 otherwise

$BRDR_{ij,t}$ : 1 for international trade; 0 for domestic trade

$BOTH\_GATTWTO_{ij,t} \equiv GATTWTO_{i,t} \times GATTWTO_{j,t} \times BRDR_{ij,t}$

$\mathbf{GRAV}_{ij,t}$ : RTAs and time-varying international border dummies  $BRDR_{ij,t}$

$\mu_{ij}$ : Time-invariant country pair fixed effects

$\pi_{i,t}$ ;  $\chi_{j,t}$ : Exporter- and importer-time fixed effects

# New database

- **Bilateral international manufacturing trade**  
Export data from UN Comtrade, expressed in free on board (FOB), and complemented by mirrored import data after adjusting for cost, insurance and freight (CIF) costs
- **Domestic manufacturing trade**  
Difference between gross manufacturing output and exports, with gross manufacturing output constructed from UN UNIDO INDSTAT; CEPII and WB's Trade, Production and Protection databases
- Unbalanced panel dataset covering 178 trading partners over the period 1980-2016

# Conclusion

# Conclusion

- Importance of accounting for non-discriminatory nature of GATT/WTO commitments
- On average, GATT/WTO membership has increased
  - trade between members by 171%
  - trade between members and non-members by about 88%
- But potential underestimated effect by mainly capturing the impact of new acceding countries
- Next step: extension to a general equilibrium gravity analysis

# Thank You for Your Attention
