|--|------|
| Index to Financial Data Tables ¹ | iii |
| Introduction to the Quarterly Financial Report Program | xii |
| Report Form Conversion Tables | xxiv |

Summary Data Tables

| | |
|--|---------|
| A. Rates of Change in Sales for Corporations in NAICS Manufacturing, Mining, Wholesale Trade, Retail Trade, Information, and Professional and Technical Services, by Sector, Select Subsectors, and Select Industry Groups .. | xxvii |
| B. Rates of Change in Profits Before Taxes for Corporations in NAICS Manufacturing, Mining, Wholesale Trade, Retail Trade, Information, and Professional and Technical Services, by Sector, Select Subsectors, and Select Industry Groups | xxviii |
| C. Rates of Change in Profits After Taxes for Corporations in NAICS Manufacturing, Mining, Wholesale Trade, Retail Trade, Information, and Professional and Technical Services, by Sector, Select Subsectors, and Select Industry Groups | xxix |
| D. Profits Per Dollar of Sales for Corporations in NAICS Manufacturing, Mining, Wholesale Trade, Retail Trade, Information, and Professional and Technical Services, by Sector, Select Subsectors, and Select Industry Groups .. | xxx |
| E. Profits Per Dollar of Sales for Corporations in the NAICS Manufacturing Sector, by Asset Size | xxxi |
| F. Annual Rates of Profit on Stockholders' Equity for Corporations in NAICS Manufacturing, Mining, Wholesale Trade, Retail Trade, Information, and Professional and Technical Services, by Sector, Select Subsectors, and Select Industry Groups | xxxii |
| G. Annual Rates of Profit on Stockholders' Equity for Corporations in the NAICS Manufacturing Sector, by Asset Size | xxxiii |
| H. Historical Rates of Return for Corporations in the NAICS Manufacturing Sector | xxxiv |
| I. Historical Rates of Return for Corporations in the NAICS Mining Sector, Assets \$50 Million and Over | xxxv |
| J. Historical Rates of Return for Corporations in the NAICS Wholesale Trade Sector, Assets \$50 Million and Over | xxxvi |
| K. Historical Rates of Return for Corporations in the NAICS Retail Trade Sector, Assets \$50 Million and Over | xxxvii |
| L. Historical Rates of Return for Corporations in the NAICS Information Sector, Assets \$50 Million and Over | xxxviii |
| M. Historical Rates of Return for Corporations in the NAICS Professional and Technical Services Sector, Assets \$50 Million and Over | xxxix |
| N. Composition of the Sample, by NAICS Sector and Asset Size | xl |
| O. Sampling Variability for Corporations in NAICS Manufacturing, Mining, Wholesale Trade, Retail Trade, Information, and Professional and Technical Services, by Sector, Select Subsectors, and Select Industry Groups .. | xli |
| P. Seasonally Adjusted Net Sales and Net Income After Tax for Corporations in the NAICS Manufacturing Sector | xlii |
| Q. Seasonally Adjusted Net Sales for Corporations in the NAICS Wholesale Trade | xliii |
| R. Seasonally Adjusted Net Sales and Net Income After Tax for Corporations in the NAICS Retail Trade | xliv |
| S. Seasonally Adjusted Net Sales for Corporations in the NAICS Information | xlv |
| T. Seasonally Adjusted Net Sales and Net Income After Tax for Corporations in the NAICS Professional and Technical Services | xlvi |

Introduction

SURVEY DESCRIPTION

The Quarterly Financial Report (QFR) Program publishes up-to-date aggregate statistics on the financial results and position of U.S. corporations. Based upon a sample survey, the QFR presents estimated statements of income and retained earnings, balance sheets, and related financial and operating ratios for manufacturing corporations with assets of \$5 million and over, and corporations in mining, wholesale trade, retail trade, information, and professional and technical services (except legal services) industries, with assets of \$50 million and over. The statistical data are classified by industry and by asset size.

The Federal Trade Commission (FTC) was responsible for the program from its inception in 1947 until December 1982. That responsibility was shared with the Securities and Exchange Commission until 1971. Authority to conduct the survey was transferred to the U.S. Census Bureau in 1982.

The Commerce Department regularly employs QFR data as an important component in determining corporate profits for the Gross Domestic Product (GDP) and National Income estimates; the Federal Reserve Board uses QFR data to assess industrial debt structure, liquidity, and profitability; the Treasury Department estimates corporate tax liability through use of QFR data; the Council of Economic Advisers and Congressional Committees utilize key indicators derived from QFR data as they design economic policies and draft legislation; the FTC utilizes the series as a basic reference point in analyzing the financial performance of American industries; and banking institutions and financial analysts draw upon the series in making investment evaluations.

Publication schedule. QFR data are scheduled for release approximately 75 days after the end of the first, second, and third-calendar quarters, and approximately 95 days after the end of the fourth-calendar quarter. The schedule of release dates for calendar year 2022 is as follows:

| QFR Quarter | Manufacturing; mining; wholesale trade; information; and professional and technical services (except legal services) industries | Retail trade |
|-------------|---|-------------------|
| Fourth 2021 | March 21, 2022 | March 21, 2022 |
| First 2022 | June 7, 2022 | June 7, 2022 |
| Second 2022 | September 7, 2022 | September 7, 2022 |
| Third 2022 | December 7, 2022 | December 7, 2022 |

The QFR publishes information on the most recently closed quarter for corporations in manufacturing, mining, wholesale trade, retail trade, information, and professional and technical services (except legal services) industries.

The following table shows how a corporation’s fiscal quarter relates to QFR quarters:

| QFR Quarter | Month corporation’s fiscal quarter ends | |
|-------------|---|--------------------------------|
| | Manufacturing; mining; wholesale trade; information; and professional and technical services (except legal services) industries | Retail trade |
| First | January, February, or March | February, March, or April |
| Second | April, May, or June | May, June, or July |
| Third | July, August, or September | August, September, or October |
| Fourth | October, November, or December | November, December, or January |

Data revisions. Revisions to QFR data are attributable primarily to industry reclassifications of major corporations involved in merger/acquisition activities, restructuring of operations, economic changes, or additional information and/or corrections submitted by respondents subsequent to last quarter’s publication. In order to reflect these changes and to provide users with comparable data, revisions are made each quarter to the most recent four quarters of previously published data.

Consolidation rules. Reporting companies have been instructed to fully consolidate the domestic operations of every company, corporate (including 1120S corporations) and noncorporate, which are taxable under the U.S. Internal Revenue Code and are owned more than 50 percent by the reporting company and its majority-owned subsidiaries. This includes every majority-owned domestic company located within the United States that manufactures, mines, or conducts other business activities with the following exceptions: foreign entities (either corporate or noncorporate), foreign branch operations, and domestic companies primarily engaged in foreign operations (plants or work forces are located in foreign countries). Subsidiaries created in foreign countries to manufacture and/or sell primarily in foreign markets are not consolidated. Also excluded from consolidation are domestic companies primarily engaged in banking, finance, or insurance as defined in the North American Industry Classification System (NAICS) Sector 52. Commonwealths such as Puerto Rico and territories such as the Virgin Islands are not considered domestic for this report.

Nonconsolidated subsidiaries are accounted for on either the cost or equity method of accounting, at the option of the reporting company. Manufacturing corporations with assets less than \$50 million report their dividend income or equity income (loss) with other nonoperating income (expense). Corporations with assets of \$50 million and over report their dividend income or equity income (loss) separately.

How corporations are classified and tabulated. The industry combinations used in the QFR are defined in accordance with the descriptions provided in the *North American Industry Classification System, United States, 2012* manual. Each corporation in the survey is required to provide a breakdown of gross receipts by source industry. These data are analyzed to determine the classification of each corporation. A reporting corporation is initially classified into the NAICS sector accounting for more gross receipts than any other NAICS sector. To be in-scope for the QFR, more gross receipts of the reporting corporation must be accounted for by either (not a combination of) the NAICS Manufacturing sector; Mining sector; Wholesale Trade sector; Retail Trade sector; Information sector; or Professional and Technical Services sector, than by any other NAICS sector. After a corporation is assigned to a sector, it is further classified by the 3-digit NAICS subsector accounting for more gross receipts than any other 3-digit subsector within the sector. In certain cases, corporations are further classified into 4-digit industry groups. QFR data are published for these subsectors and industry groups, except when statistical criteria are not satisfied. In those cases, sectors or subsectors are combined, such as Leather Product Manufacturing and Apparel Manufacturing.

Note that these procedures may lead to a conglomerate corporation being assigned to a major group from which only a small proportion of its receipts are obtained. For example, if a corporation obtains 20 percent of its gross receipts from wholesale trade, 25 percent each from mining and retail trade, and 30 percent from manufacturing, it would be classified in the manufacturing sector. Furthermore, if the 30 percent of manufacturing activity was conducted in two subsectors, 10 percent in one and 20 percent in the other, the activities of the corporation as a whole would be classified in the subsector accounting for 20 percent of total receipts.

When a corporation is drawn into the sample, its classification is determined using the most current information available. This classification is reviewed periodically and changed as needed for as long as the corporation remains in the sample. Manufacturing corporations are tabulated according to their total assets reported for that quarter. Mining; wholesale trade; retail trade; information; and professional and technical services corporations are tabulated according to their total assets at the time of sample selection.

DATA ANALYSIS

Financial operating ratios. Many quantitative indicators are used to assess the financial strength of an enterprise and the success of its operations. The simplest method is to assemble related financial items, such as sales and profits, and to express this relationship in the form of a ratio. Using these ratios, various aspects of corporate operations may be compared with the performance of other corporations or groups of corporations of similar size or in a similar industry.

The QFR's ratio-formatted income statement and selected balance sheet ratios are expressed as percents of net sales and total assets, respectively. The operating and financial characteristics of the respective industries and asset size groups are thus reduced to a common denominator to facilitate analysis.

The ratio tables include the following additional basic operating ratios:

- **Annual rate of profit on stockholders' equity at end of period.** This ratio is obtained by multiplying income for the quarter before or after domestic taxes (including branch income (loss) and equity in the earnings of nonconsolidated subsidiaries net of foreign taxes) by four, to put it on an annual basis, and then dividing by stockholders' equity at the end of the quarter. This ratio measures the rate of return that accrues to stockholders on their investment.
- **Annual rate of profit on total assets.** This ratio is obtained by multiplying income, as defined in deriving the rate of profit on stockholders' equity, both before and after taxes, by four, and then dividing by total assets at the end of the quarter. This ratio measures the productivity of assets in terms of producing income.
- **Total current assets to total current liabilities.** This ratio is obtained by dividing total current assets by total current liabilities. This ratio measures the ability to discharge current maturing obligations from existing current assets.
- **Total cash and U.S. Government and other securities to total current liabilities.** This ratio is obtained by dividing total cash and U.S. Government and other securities by total current liabilities. This ratio measures the ability to discharge current liabilities from liquid assets.
- **Total stockholders' equity to total debt.** This ratio is obtained by dividing total stockholders' equity by the total of short-term loans, current installments on long-term debt, and long-term debt due in more than one year. This ratio indicates the extent of leverage financing used.

Comparisons with other statistics. QFR estimates will not necessarily agree with other financial and industrial statistics, whether based upon a sample or complete canvass. For example:

- The QFR eliminates multiple counting of interplant and other intracompany transfers included in census establishment statistics. It also eliminates multiple counting of intercorporate transfers included in statistics based upon nonconsolidated, partly consolidated, or combined reports from multicorporate enterprises.
- Each corporation who elect to file Form 1120 with the IRS and is in scope of the QFR is classified in one of 46 QFR subsectors or industry groups and has a known probability of being drawn into the QFR sample. Each corporation in the QFR sample is therefore given its proper weight in computing the QFR estimates. The composition of the sample changes each quarter to reflect the effects of corporate births, deaths, acquisitions, divestitures, mergers, consolidations, and the like. To redistribute the reporting responsibility as equitably as possible among the smallest corporations, one-eighth of the noncertainty sample is replaced each quarter. The QFR estimates may, therefore, differ significantly from estimates based upon reports for identical groups of corporations.
- The conventional accounting concept of profits is used in the QFR estimates. This differs from the concept of profits employed in the national income and product accounts. In measuring profits for national income accounting purposes, capital gains and dividends received by corporations are deducted from profits, capital losses and depletion charges are added to profits, and adjustments are made for international flows affecting profits.
- Corporations' QFR submissions generally embody the accounting conventions adopted for financial reporting purposes. As such, they may differ from those used by corporations for reporting income to the Internal Revenue Service (IRS); for example, in the more frequent application of accelerated depreciation on tax returns. Therefore, annual income and balance sheet information derived from tax returns, which can be found in the IRS report series *Statistics of Income: Corporation Income Tax Returns*, may not be comparable.
- QFR estimates by corporation size are based upon the total assets of consolidated corporate enterprises. They differ from estimates based upon other criteria such as value of shipments or number of employees. They differ also from estimates based upon other reporting units such as establishments, nonconsolidated corporations, or enterprises consolidated differently than in the QFR.
- QFR estimates are based upon a changing sample of audited, unaudited, and estimated reports required to be submitted within 25 days after the end of each quarterly reporting period by corporations that are not necessarily identical entities from quarter to quarter. Aggregated for any four consecutive quarters, the QFR estimates will differ from similar aggregations of finalized and audited annual reports for accounting years that are not necessarily identical from corporation to corporation.

Time series discontinuities. Because of various changes to the QFR program over the years, discontinuities that affect its use as a time series for tracking economic change have been introduced. The most significant ones follow:

- **Accounting rules changes.** When the QFR series began in 1947, corporations were instructed to consolidate all of their subsidiaries that were taxable under the U.S. Internal Revenue Code and that were fully consolidated in their latest report to stockholders. All other subsidiaries were to be accounted for as investments. Closely held corporations that did not prepare stockholder reports were to report on a basis consistent with their audited or corporation prepared reports.

The income tax liability rule was expected to eliminate most foreign operations. However, as the number of multinational corporations increased between 1947 and 1973, foreign operations gradually became more and more significant in the QFR data. To study these issues and develop solutions, an interagency task force composed of user agency representatives was created. This task force proposed new consolidation rules to maximize coverage and minimize the impact of foreign operations on QFR statistics. These new consolidation rules were put into effect in the fourth quarter of 1973 (see Consolidation rules paragraphs above). As a result of these changes, foreign operations are included on an investment basis. In addition,

the breadth of the new consolidation rules was expanded to include certain domestic subsidiaries previously excluded under the old rules. Also, the rules were clarified with respect to the scope of coverage. Domestic subsidiaries engaged in banking, finance, or insurance are not to be consolidated.

The change in consolidation rules and the creation of a line item to reflect equity in earnings from nonconsolidated subsidiaries, significantly lessened the comparability of pre- and post-Q4 1973 reports. QFR internal accounting procedures prior to the rule change required the classification of equity in earnings (losses) as direct credit or charge to retained earnings. Therefore, when a reporting corporation indicated by footnote that its equity in nonconsolidated subsidiary earnings (losses) was included in its current quarter's income (loss), the QFR accounting staff made the appropriate adjustment. With the addition of the separate line on equity, this adjustment is not made.

Equity in earnings (losses) is accounted for as an element of the parent corporation's quarterly income (loss) after taxes. The treatment of dividend income received from nonconsolidated subsidiaries accounted for by the cost method has remained consistent under both the new and old format. In these instances, dividends received are included in net income before taxes (NIBT) through the nonoperating income line. A comparison of aggregated totals published under both the old and new consolidation rules indicates the following:

- There was a net decrease in sales, apparently due to the exclusion of foreign activities previously included.
 - There was a net decrease in NIBT apparently due to two major effects: 1) Equity in earnings (losses) from nonconsolidated subsidiaries is reflected on a designated line below NIBT, whereas prior reports often included this amount in NIBT. If the reporting company did not footnote this inclusion, QFR accountants were unable to make the proper adjustment; and 2) If foreign activity was fully consolidated, foreign earnings were also included in NIBT. The new consolidation rules minimize this effect as well.
 - The net effect of the rule changes on net income after taxes (NIAT) was small. Under both rules, foreign activity should be included above the NIAT line. The slight degree of difference also suggests that the QFR footnoted equity in earnings (losses) on nonconsolidated subsidiaries were not extensive enough to affect comparative published data materially.
 - Noncurrent assets include investments in nonconsolidated subsidiaries under either the cost or equity method. The rule change precluding full consolidation of foreign activity caused a marked increase in this line item. Corporations that consolidated foreign activity fully up to 1973 were required to eliminate their investment in accordance with generally accepted accounting principles. Since foreign activity is not fully consolidated, investments in these subsidiaries are included in noncurrent assets.
- **Industry classification system changes.** The fourth quarter of 2001 reflects the conversion of the QFR to the North American Industry Classification System (NAICS) from the Standard Industrial Classification (SIC) system. With NAICS, there were major changes in how industries are defined requiring the movement of many corporations to different industry categories. The most notable changes were: moving publishing activities from manufacturing to the information sector; moving logging to the agriculture, forestry, fishing, and hunting sector; moving eating and drinking places from retail trade to the accommodation and food services sector; redistributing instruments and related products to several new or redefined manufacturing sectors; and creating the NAICS computer and electronic products manufacturing sector. Data for the fourth quarter of 2000 through the third quarter of 2001 were restated on the new NAICS basis.
 - **Sample design changes.** The first sample in this survey was drawn from U.S. Corporation Income Tax Returns (Form 1120) filed with IRS for the taxable year 1943 and was used to produce estimates for 1947 to 1951. A second sample was drawn from income tax returns for the taxable year 1949 and was used to produce data for 1951 to 1956. Since then, samples are drawn annually from income tax returns to produce data.

Each sample through fourth quarter 1982 was supplemented by quarterly samples of applications for a Federal Social Security Employer's Identification Number filed with the Social Security Administration (SSA). Subsequent to that quarter the QFR lost its authority to obtain the SSA data.

From the third quarter 1977 through the fourth quarter 1986, the strata including very small manufacturing firms (those with assets less than \$250,000) and all newly incorporated manufacturers were estimated using multivariate techniques. Beginning in the first quarter 1987, the QFR universe of corporations was redefined to exclude these strata. Beginning in the fourth quarter of 1988, the asset level for inclusion in published mining, wholesale trade, and retail trade estimates was raised to \$50 million at the time of sample selection. These latter changes to the sample rules were effected to reduce reporting burden on small companies and to meet changing budget constraints.

Effective with the fourth quarter 2001 report, cooperatives were defined out-of-scope of the QFR program. These firms, which are primarily in the manufacturing and wholesale trade food sectors, file 990-C Farmers' Cooperative Association tax returns with the IRS. Also, even though many are incorporated, they have tax exempt status with the IRS.

Beginning with the fourth quarter 2009, corporations with \$50 million or more in total assets and classified in Sector 51- Information, and Sector 54- Professional and Technical Services (except Legal Services, Industry Group 5411), were defined as in-scope of the QFR program. The aggregated data for these sectors were first released in the fourth quarter 2010 data release, when five quarters of data were available.

Beginning with the fourth quarter of 2020, the asset level for inclusion in the sample for manufacturing corporations was raised to \$5 million from \$250,000 to reduce reporting burden on small companies and meet changing budget constraints.

- **Questionnaire changes.** In 1980, Congress mandated a reduction in both QFR form complexity and sample size. In response, the program adopted an abbreviated form for surveyed corporations with total assets of less than \$50 million. Corporations with higher asset values continued to submit the long form, which has been in use since 1974. To accomplish the sample size reduction, the threshold for sampling on less than a 1:1 ratio was raised from \$10 million to \$25 million in assets. The threshold for sampling was subsequently raised to \$50 million in 1988, \$250 million in 1995, and to an industry-specific value above \$750 million in 2020 (see Survey Methodology section below). The resulting reduced sample size was optimally allocated with further cuts made in asset sizes below \$10 million. The results of these changes were reflected beginning in the fourth quarter of 1981.

Beginning with the first quarter of 1998, the long and short survey forms were updated to conform with changes in accounting principles and to provide more meaningful data to users. The new format provided for reporting of interest expense, bonds and debentures, and more detailed information on significant economic events, such as asset sales and disposal of business segments. NIBT and NIAT were redefined to include minority stockholders' interest. In some instances, old data items were not fully comparable with the new format; however, where possible, prior quarter data were restated in the new format.

Tables for converting long format data items to short format data items are located on pages xxii and xxiii. Note that data tables presenting total estimates by NAICS sector, subsector, and industry group are published on the short-form basis; therefore, the more detailed long form data submitted by larger corporations (those with assets of \$50 million and over) are collapsed in these tables.

Corporations filing the short form, report equity in earnings (losses) of nonconsolidated subsidiaries and foreign branches as a component of all other nonoperating income (expense). Although this treatment will introduce elements of foreign earnings (losses) into income (or loss) before income taxes, the contribution of foreign earnings (losses) of these smaller asset size corporations to this data item has been historically insignificant. Corporations with assets of \$50 million and over continue to report equity in earnings (losses) as a separate data item. As can be seen in the conversion table, this data item is collapsed for total estimation into all other nonoperating income (expense).

However, since these larger asset size corporations continue to report equity in earnings (losses) separately, as reflected in the tables published for corporations with assets of \$25 million and over, comparability with prior data can be achieved through subtraction.

- **Imputation methodology changes:** Beginning with the fourth quarter 2010 publication, a new imputation methodology was implemented to account for nonresponding companies using statistical procedures that utilize previously reported data (if available) and data from current respondents of similar asset size and industry classification. Estimates for the prior four quarters (fourth quarter 2009 through third quarter 2010) were restated using this new methodology in order to provide comparability. For more information, see the Survey Methodology section below.

SURVEY METHODOLOGY

Sampling frame. The QFR target population consists of all corporations engaged primarily in manufacturing with total assets of \$5 million and over, and all other corporations engaged primarily in mining, wholesale trade, retail trade, information, or professional and technical services (except legal services) industries with total assets of \$50 million and over. The QFR sampling frame is developed from a file received annually from the IRS. This file contains selected information for corporations that filed Form 1120 with the IRS. Once this file is received, the QFR examines the information and assigns an initial NAICS industry code to each corporation. Then this file is stratified based on the NAICS code, size of total assets, and size of receipts.

Corporations whose operations are within scope of the QFR and have total assets of \$250 million and over may be included in the sample with certainty, based on industry-specific asset and receipt cutoffs. These certainty corporations are canvassed every quarter. All certainty cases from the prior years' samples remain active in the QFR survey if they still meet the in-scope criteria.

Sample selection. Corporations below the industry-specific certainty cutoffs, also called noncertainty units, are selected by stratified random sample, with strata defined by industry and asset size. Simple random samples are selected from the eligible noncertainty units in each industry-by-size stratum. The sample in each cell is divided systematically into four panels that are introduced over the next year. Each noncertainty panel is in the survey for eight successive quarters. Each quarter, one noncertainty panel is rotated out and a new panel is rotated into the sample. This means that the noncertainty sample for adjacent quarters is seven-eighths identical and is one-half identical for quarters ending one year apart. This panel rotation scheme also means that panels from up to three different sample frames could be active in the QFR survey. Panels from the most recent sample are introduced into the QFR survey starting in the fourth quarter, with the remaining three panels being introduced, one at a time, into the sample in each succeeding quarter (i.e., quarters one, two, and three). Then this process starts over again with the new sample selected in the following year.

See *Table N – Composition of the Sample*, in the Summary Data Tables section of the current QFR publication (available at <http://www.census.gov/econ/qfr/index.html>) for the number of active corporations in the sample by NAICS sector and asset size for the current quarter.

As a result of the Paperwork Reduction Act of 1995 and QFR sampling practices, QFR sample units are subject to time-in / time-out constraints. If a sampled company has less than \$50 million in total assets and has been in the survey for eight quarters, that company is not eligible for selection again for the next ten years. If a company has total assets between \$50 million and \$250 million and has been in the survey for eight quarters, it is not eligible for selection again for the next two years. If a company has total assets between \$250 million and the industry-specific cutoffs and has been in the survey for eight quarters, it is not eligible for selection again for the next year. Because of the time-in / time-out constraints, it is necessary to evaluate the frame to ensure there are enough eligible units for the four panels of the current sample to be selected and that there will remain enough units on the frame that will be eligible for selection in subsequent years. If there are too few units, the optimal sample size for the current year is reduced to allow enough units for future years' selections. This adjustment to the optimal sample size results in increased variance for these strata.

Sample maintenance. The file received from the IRS to create the QFR frame does not contain all corporate tax returns. This is due to several factors, including but not limited to, corporations filing late tax returns, mergers and acquisitions, spinoffs, corporate restructuring, etc. In an attempt to keep the coverage of certainty corporations as complete as possible, the QFR staff reviews current corporate news releases and public records to identify any potential additions and changes to the QFR target population. Corporations thus identified and thought to meet the QFR in-scope criteria are contacted to verify their in-scope status. Once verified, they will be included in the survey with certainty for the remainder of the year.

Data quality indicators. The QFR produces two indicators of data quality: the Unit Response Rate (URR) and the Total Quantity Response Rate (TQRR). The URR is defined as the percentage of sampled units (unweighted) that responded to the current quarter's survey. In determining the URR, a unit is classified as a respondent if it provided adequate information for key QFR data items. The TQRR is defined as the proportion of the weighted estimated total of a key QFR data item that is either reported by a survey unit or acquired from some other information source (such as a publicly available quarterly or annual report) and is determined to be equivalent in quality to reported data.

The TQRR is calculated for the QFR data items net sales, depreciation, income before income taxes, and total assets. The imputation rate, or the percentage of the weighted estimated total of a key QFR data item that is imputed for nonresponding units, is calculated as 100% minus TQRR. The current quarter Unit Response Rates and Total Quantity Response Rates are published in the QFR press releases available at <http://www.census.gov/econ/qfr>.

Current and historical data quality indicators are available at the following links:

- https://www.census.gov/econ/qfr/mmws/current/qfr_mg.pdf (current quarter data quality indicators for manufacturing, mining, wholesale, and selected services industries)
- https://www.census.gov/econ/qfr/retail/current/qfr_rt.pdf (current quarter data quality indicators for retail industries)
- https://www.census.gov/econ/qfr/documents/hist_mmw_resp_rates.pdf (historical data quality indicators spanning 20 quarters for manufacturing, mining, wholesale, and selected service industries)
- https://www.census.gov/econ/qfr/documents/hist_ret_resp_rates.pdf (historical data quality indicators spanning 20 quarters for retail industries)

Nonresponse. Beginning with the fourth quarter 2010, the QFR implemented an improved methodology to account for companies that are active in the sample but did not respond to the questionnaire. Prior to fourth quarter of 2010, nonrespondent noncertainty sample companies were accounted for by adjusting the weight of the respondent companies. At the same time, certainty companies were imputed. The improved methodology imputes data for all nonresponding companies (units) using statistical procedures that utilize previously reported data (if available) and data from current respondents of similar asset size and industry classification. Imputation also balances the accounting form items so that detail items sum to total items. The improved imputation methodology, on average, produces more accurate data estimates and better reflects current financial standing.

Each item on the form is treated independently with regard to imputation method. Prior studies have determined the priority order of imputation methods for each item. The primary imputation method utilized by the QFR is Auxiliary Ratio (AUXRAT), which is carried out via the formula:

$$Y_{jt} = \frac{\sum_i W_{it} * X_{it}}{\sum_i W_{i\hat{t}} * X_{i\hat{t}}} * X_{j\hat{t}}$$

where:

Y_{jt} = Value imputed for non-responding company j at time t (Current Quarter)

W_{it} = Weight for responding company i at time t (Current Quarter)

X_{it} = Value for responding company i at time t (Current Quarter)

$W_{i\hat{t}}$ = Weight for responding company i at time \hat{t} (1st or 2nd Prior Quarter)

$X_{i\hat{t}}$ = Value for responding company i at time \hat{t} (1st or 2nd Prior Quarter)

$X_{j\hat{t}}$ = Prior value for current quarter non-responding company j at time \hat{t} (1st or 2nd Prior Quarter)

Other imputation methods include Weighted Mean, Mode, Value, Simple Regression, and Sum.

Most of the imputation methods require the use of an imputation base. Each company is assigned to an imputation cell based upon its asset size class and industry. The imputation base is restricted such that only respondent cases that pass the edit and are balanced are included. Outlier detection methods, including Hidiroglou-Berthelot and Asymmetric Fences, are utilized to remove influential cases from the base.

Note: Imputation for nonrespondent cases is performed for current quarter processing only. If an originally imputed case reports data for the current quarter after the initial publication, that case's reported data will be included in revisions to that quarter's data in the next scheduled publication; however, the original imputed data for the remaining nonresponding cases for that quarter will not be re-imputed.

Estimation. The QFR uses a variable weight estimator. This estimator takes into account the panel rotation scheme described above as well as the sample maintenance techniques employed to keep the industry classification and company structure for active sample cases as up to date as possible. Data for those cases that are active in the sample but do not respond to the questionnaire are imputed (see Nonresponse paragraph above).

The estimates are calculated as follows:

$$\begin{aligned}\hat{X}_{kit} &= \left[\frac{(4 - b_{kit}) \hat{N}_{kit}^{(-2)} + \frac{4}{q_{kit}} \hat{N}_{kit}^{(-1)} + \frac{b_{kit}}{q_{kit}} \hat{N}_{kit}^{(0)}}{n_{kit}^{(-2)} + n_{kit}^{(-1)} + n_{kit}^{(0)}} \right] * \left[\sum_{hi \in ki} \sum_{j \in hki} I_{jhki} x_{jhki} \right] \\ &= \left[\frac{\hat{N}_{kit}}{n_{kit}} \right] * [x_{kit}] \\ &= [\hat{W}_{kit}] * x_{kit}\end{aligned}$$

where:

$\hat{N}_{kit}^{(0)}$, $\hat{N}_{kit}^{(-1)}$, and $\hat{N}_{kit}^{(-2)}$ = Estimated population sizes in enumerated industry k and asset class i at time t for the sample from the current year frame (0), sample from prior year's frame (-1), and sample from prior prior year's frame (-2);

$n_{kit}^{(0)}$, $n_{kit}^{(-1)}$, and $n_{kit}^{(-2)}$ = Number of sampled cases in currently active panels in enumerated industry k and asset class i at time t from the (up to) three eligible sample frame years

q_{kit} = Total number of active panels in enumerated industry k and asset class i at time t (usually 8)

b_{kit} = Number of active panels in the sample from the current year frame in enumerated industry k and asset class i at time t (usually 1 in fourth quarter, 2 in first quarter, 3 in second quarter, and 4 in third quarter)

I_{jhkit} = Indicator variable (either 1 or 0) indicating that company j was sampled in sampling industry h and enumerated in industry k and asset class i at time t

x_{jhkit} = Reported or imputed data value for company j which was sampled in sampling industry h and enumerated in industry k and asset class i at time t

\hat{N}_{kit} = Estimated population size in enumerated industry k and asset class i at time t

n_{kit} = Number of sampled cases in currently active panels in enumerated industry k and asset class i at time t

x_{kit} = Sum of reported and imputed data for cases in enumerated industry k and asset class i at time t

\hat{W}_{kit} = Variable weight for enumerated industry k and asset class i at time t

Disclosure Avoidance. Disclosure is the release of data that reveals information or permits deduction of information about a particular survey unit through the release of either tables or microdata. Disclosure avoidance is the process used to protect each survey unit's identity and data from disclosure. Using disclosure avoidance procedures, the Census Bureau modifies or removes the characteristics that put information at risk of disclosure. Although it may appear that a table shows information about a specific survey unit, the Census Bureau has taken steps to disguise or suppress a unit's data that may be "at risk" of disclosure while making sure the results are still useful.

The Census Bureau has reviewed the data product for unauthorized disclosure of confidential information and has approved the disclosure avoidance practices applied. (Approval ID: CBDRB-FY21-206).

Sampling error. The sample used in this survey is one of many possible samples that could have been selected using the sampling methodology described earlier. Each of these possible samples would likely yield different results. These samples give rise to a distribution of estimates for the unknown population value. A statistical measure of the variability among these estimates is the standard error (SE), which can be estimated from any one sample. The standard error is defined as the square root of the variance. The relative standard error (RSE) of an estimate is the standard error of the estimate divided by the estimate and is usually expressed as a percent. It provides a measure of the variation of the data relative to the estimate being made. Note that measures of sampling variability, such as the standard error and relative standard error, are estimated from the sample and are also subject to sampling variability. *Table O – Sampling Variability*, in the Summary Data Tables section of the current QFR publication, gives the estimates of the relative standard error in percent for the estimates of net sales, depreciation, inventories, and total assets, and the estimates of standard error for income before income taxes.

Beginning with the third quarter 2006 publication, the methodology for calculating the sample variance changed. Prior methodology used a design-based approach, whereas the new methodology uses a model-based approach. This new approach provides a better estimate of sample variance in strata with few sample cases, and also reflects some of the variability due to our methods used to account for nonresponding companies. The relative standard errors presented in *Table O – Sampling Variability*, mentioned above, can be used to derive the standard error of the estimate. The standard error can be used to derive interval estimates with prescribed levels of confidence that the interval includes the average results of all samples:

- Intervals defined by one standard error above and below the sample estimate will contain the true value approximately 68 percent of the time
- Intervals defined by 1.6 standard errors above and below the sample estimate will contain the true value approximately 90 percent of the time
- Intervals defined by two standard errors above and below the sample estimate will contain the true value approximately 95 percent of the time

To illustrate the computations involved in the above confidence statements as related to dollar volume net sales estimates, assume that an estimate of net sales for all manufacturing published in *Table 1.0 – Income Statement For Corporations in the NAICS Manufacturing Sector*, in the Financial Data Tables section of the current QFR publication, is \$525,000 million for a particular quarter and that the relative standard error for this estimate, as given in *Table O – Sampling Variability*, in the Summary Data Tables section, is 0.2 percent.

Then the SE is calculated as:

$$\begin{aligned}
 SE(\hat{X}_{kit}) &= \left[\frac{RSE(\hat{X}_{kit})}{100} \right] * \hat{X}_{kit} \\
 &= \left[\frac{.2}{100} \right] * \$525,000 \text{ million} \\
 &= \$1,050 \text{ million}
 \end{aligned}$$

Therefore, a 90-percent confidence interval is:

$$\begin{aligned}
 &\$525,000 \text{ million} \pm 1.6 (\$1,050 \text{ million}) \\
 &= \$525,000 \pm \$1,680 \text{ million,} \\
 &\text{or } \$523,320 \text{ million to } \$526,680 \text{ million.}
 \end{aligned}$$

If corresponding confidence intervals were constructed for all possible samples of the same size and design, approximately 90 percent of the intervals would contain the figure obtained from a complete enumeration.

Nonsampling error. The relative standard error estimates sampling variation but does not measure all errors in the data. Nonsampling errors can be attributed to many possible sources:

- Coverage error, such as failure to accurately represent all population units in the sample, or the inability to obtain information about all sample cases
- Response errors, possibly due to definitional difficulties or misreporting
- Mistakes in recording or coding the data obtained
- Other errors of coverage, collection, nonresponse, response, processing, or imputing for missing or inconsistent data

These nonsampling errors also occur in complete censuses. Although no direct measures of these errors have been obtained, precautionary steps were taken in all phases of the collection, processing, and tabulation of the data to minimize their influence.

Adjustment for seasonal variation. The QFR seasonally adjusts net sales and net income after taxes for all manufacturing, all durable manufacturing, all nondurable manufacturing, and professional and technical services; and net sales for all retail trade, information, and wholesale trade using the X-13 ARIMA-SEATS¹ program.

Seasonal adjustment is the process of estimating and removing the seasonal elements in a data series. This adjustment eliminates the seasonal trend present in the series and reveals non-seasonal features and trends. The precision of the adjustment is dependent upon economic conditions and various other elements that introduce significant changes to seasonal patterns. A more stable climate will result in a more precise adjustment, while volatility can reduce precision, especially in the short-term.

Seasonally adjusted data are published in the QFR press releases available at <http://www.census.gov/econ/qfr> and <https://www.census.gov/econ/qfr/historic.html>. The releases provide seasonally adjusted estimates for the current quarter, all previously published quarters in the current calendar year, and for prior calendar years. All prior seasonally adjusted data are updated each quarter based on the most recent data and seasonal factors. The seasonal adjustment models are periodically reviewed and updated to account for recent changes in seasonal trends.

¹ X-13ARIMA-SEATS is an updated version of the Census Bureau's X-12-ARIMA software. More information about X-13ARIMA-SEATS is available at <https://www.census.gov/data/software/x13as.X-13ARIMA-SEATS.html>.

CONVERSION TABLE FOR INCOME STATEMENT LONG TO SHORT FORMAT

¹ Includes net income (loss) of foreign branches and equity in earnings (losses) of nonconsolidated subsidiaries, net of foreign taxes.² Mining, wholesale trade, retail trade, information, and professional and technical services data represent the quarterly results of companies with total assets of \$50 million and over at the time of sample selection. Data for manufacturing corporations represent the quarterly results of companies with total assets of \$5 million and over at the time of sample selection.³ Included in subsector above.⁴ Sampling variability precludes characterizing change.⁵ Change from gain to loss or vice versa.⁶ Except legal services.

¹ Profit figures include net income (loss) of foreign branches and equity in earnings (losses) of nonconsolidated subsidiaries, net of foreign taxes.² Mining, wholesale trade, retail trade, information, and professional and technical services data represent the quarterly results of companies with total assets of \$50 million and over at the time of sample selection. Data for manufacturing corporations represent the quarterly results of companies with total assets of \$5 million and over at the time of sample selection.³ Included in subsector above.⁴ Except legal services.

| \$1 billion and over | 4,281,301 | 96 | 177 | 1,524,383 | 83 | 261 |

¹ Includes manufacturing corporations with total assets of \$5 million and over at the time of sample selection.

² Includes mining, wholesale trade, retail trade, information, and professional and technical services corporations with total assets of \$50 million and over at the time of sample selection.

³ Except legal services.

⁴ Estimated universe total; figures are rounded and will not necessarily add to totals.

⁵ Manufacturing sample was drawn from a universe of approximately 32,020.

⁶ Mining sample was drawn from a universe of approximately 543.

⁷ Wholesale trade sample was drawn from a universe of approximately 3,268.

⁸ Retail trade sample was drawn from a universe of approximately 1,637.

⁹ Information sample was drawn from a universe of approximately 1,272.

¹⁰ Professional and technical services sample was drawn from a universe of approximately 2,458.

¹¹ Withheld to avoid disclosing the data of individual companies.

Table O -- Sampling Variability

For Corporations in NAICS Manufacturing, Mining, Wholesale Trade, Retail Trade, Information, and Professional and Technical Services (except Legal Services), By Sector, Select Subsectors, and Select Industry Groups

| Industry | Relative standard error ¹ | | | | Standard error ¹ |
|--|--------------------------------------|--------------|-------------|--------------|-----------------------------|
| | Net sales | Depreciation | Inventories | Total assets | Income before income taxes |
| | | (percent) | | | (million dollars) |

| All professional and technical services ³ | 5.9 | 5.0 | 7.5 | 3.1 | 890 |

¹ The relative standard error (RSE) for the item "Income before income taxes" is more volatile than for the other items shown on this table. This is due in part to the fact that "Income before income taxes" can be negative. Aggregation of positive and negative values may result in totals which approach zero and cause the RSE's to rapidly increase. Therefore, the standard error (SE) is provided as a measure of precision for this item and should show consistency from quarter to quarter. For information on the meaning and use of the RSE and SE, see the Survey Methodology section in the Introduction.

² Included in subsector above.

³ Except legal services.

Table P -- Seasonally Adjusted Net Sales and Net Income After Tax
For Corporations in the NAICS Manufacturing Sector¹
